waste water sewage and treatment in Böblingen-Sindelfingen

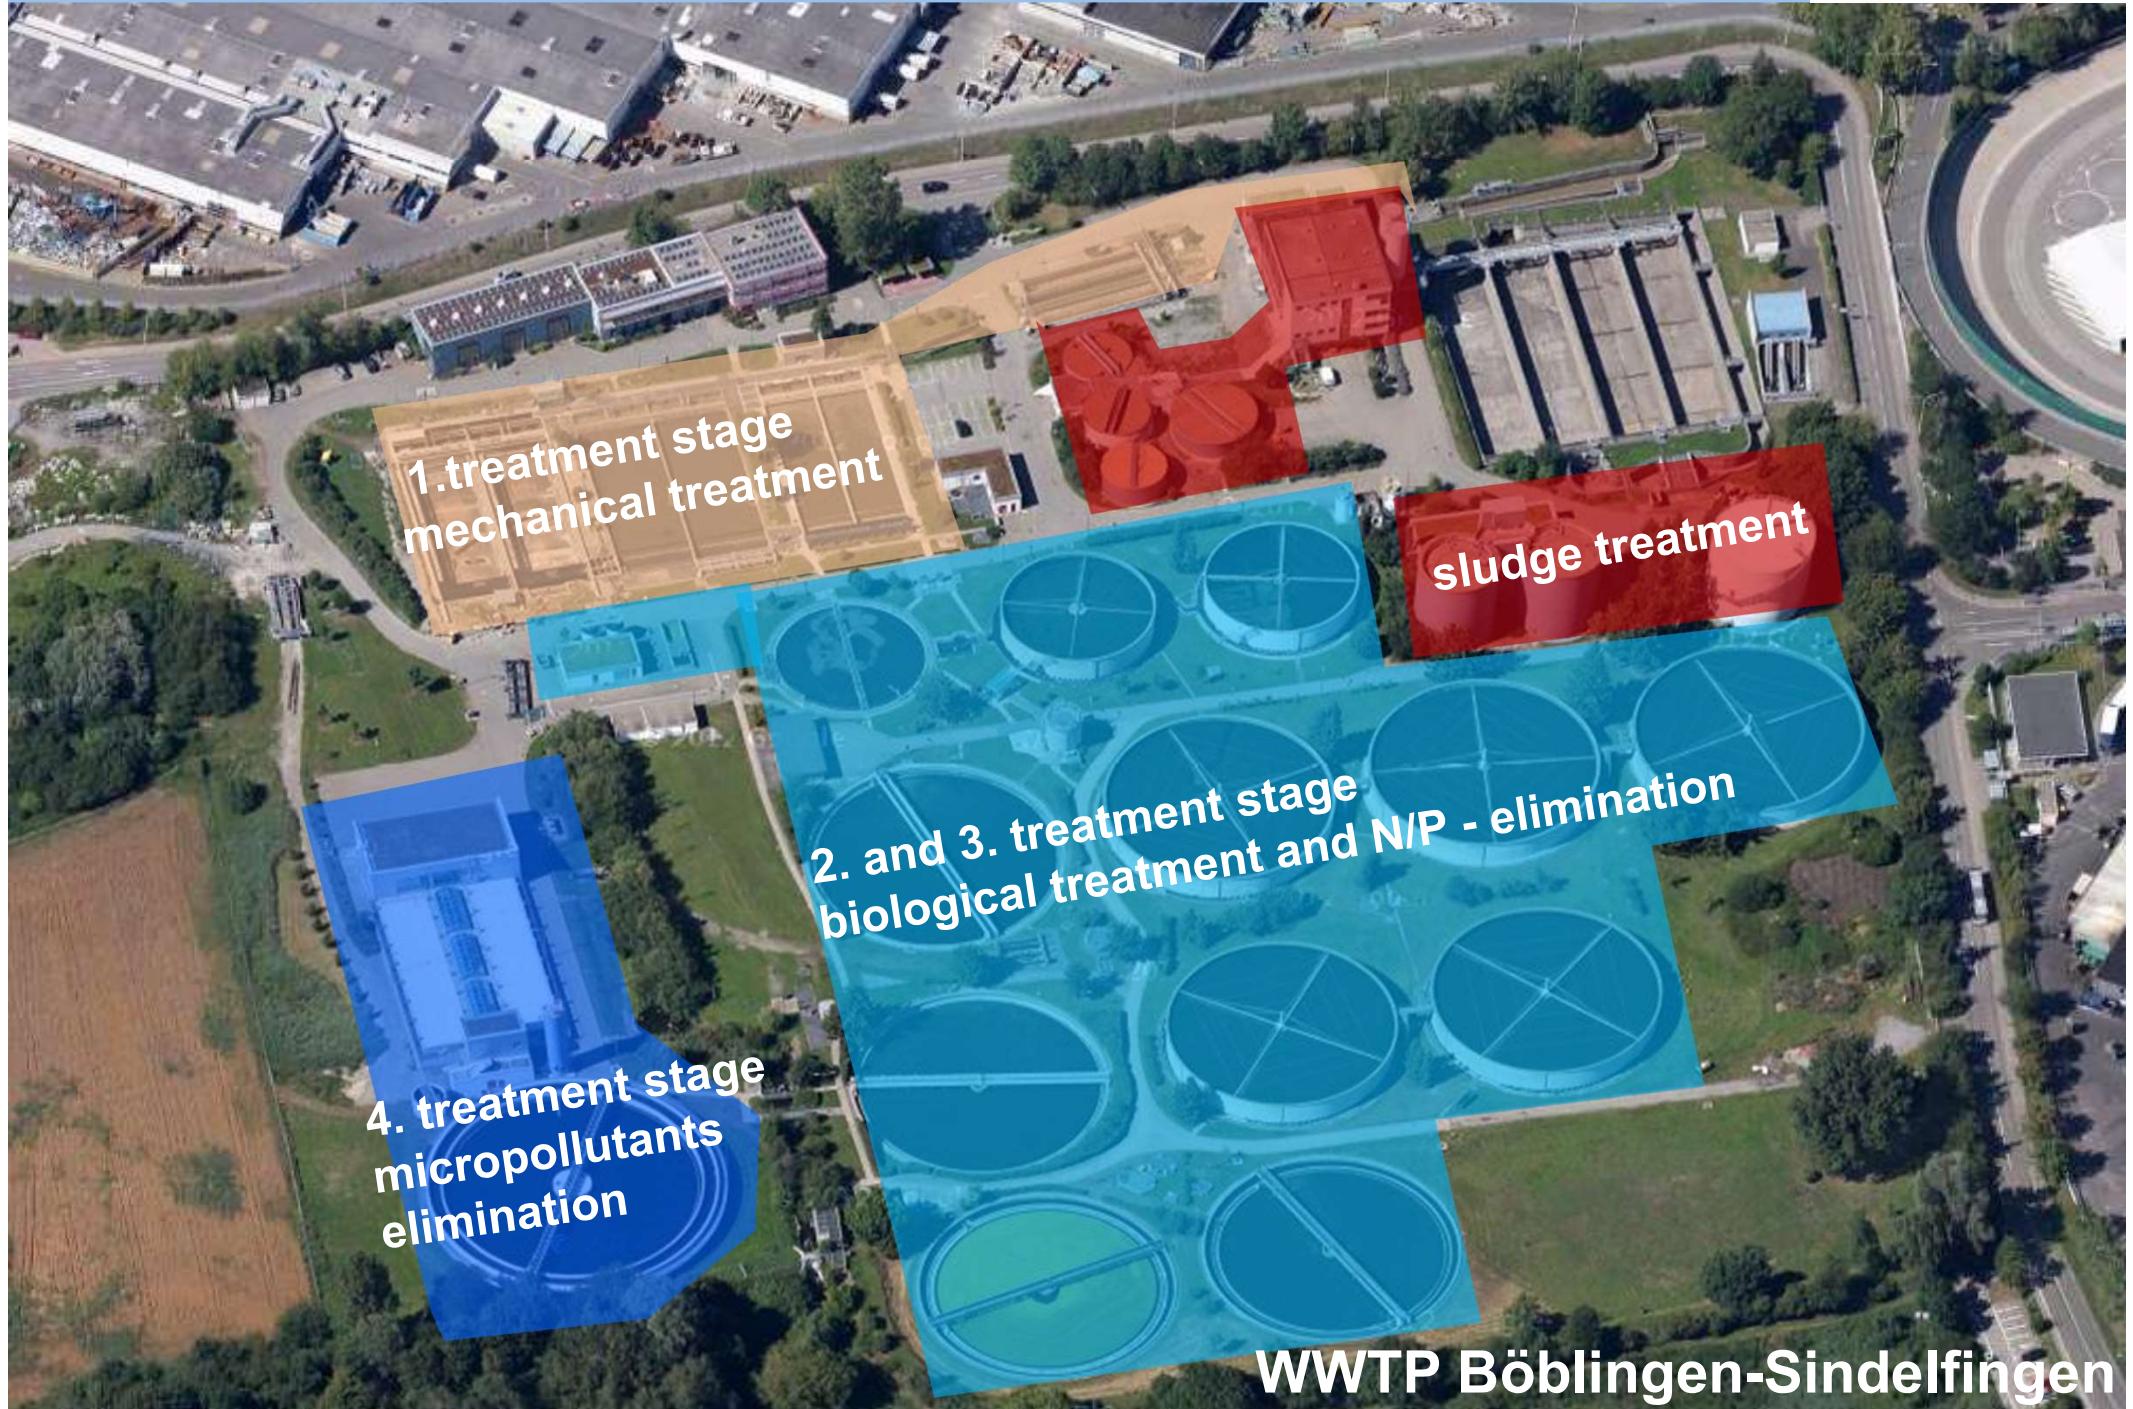

WWTP Dagersheim-Darmsheim

WWTP Dagersheim-Darmsheim	operation data	2020
design capacity	13 500 PE	
current load (calculate with 120 g COD/(PE*d))	11 650 PE	
Influent		
Influent by dry weather	1 600 m³/d	
max. wet weather influent	110 l/s 7500 m³/d	
total annual treated waste water	910 000 m³/a	
infiltration water into sewer system	15%	
COD load (average)	1 400 kg/d	
COD load (85%-value)	1 700 kg/d	
Effluent (annual average)		
COD	23.6 mg/L	
P _{total}	0.16 mg/L	
N _{total} (N _{anorg} + N _{org})	6.0 mg/L	
NH ₄ -N	0.7 mg/L	
Energy		
Consumption of electricity	409 151 kWh/a 35.1 kWh/(PE*a)	
Production of electricity with CHP	150 751 kWh/a 12.9 kWh/(PE*a)	

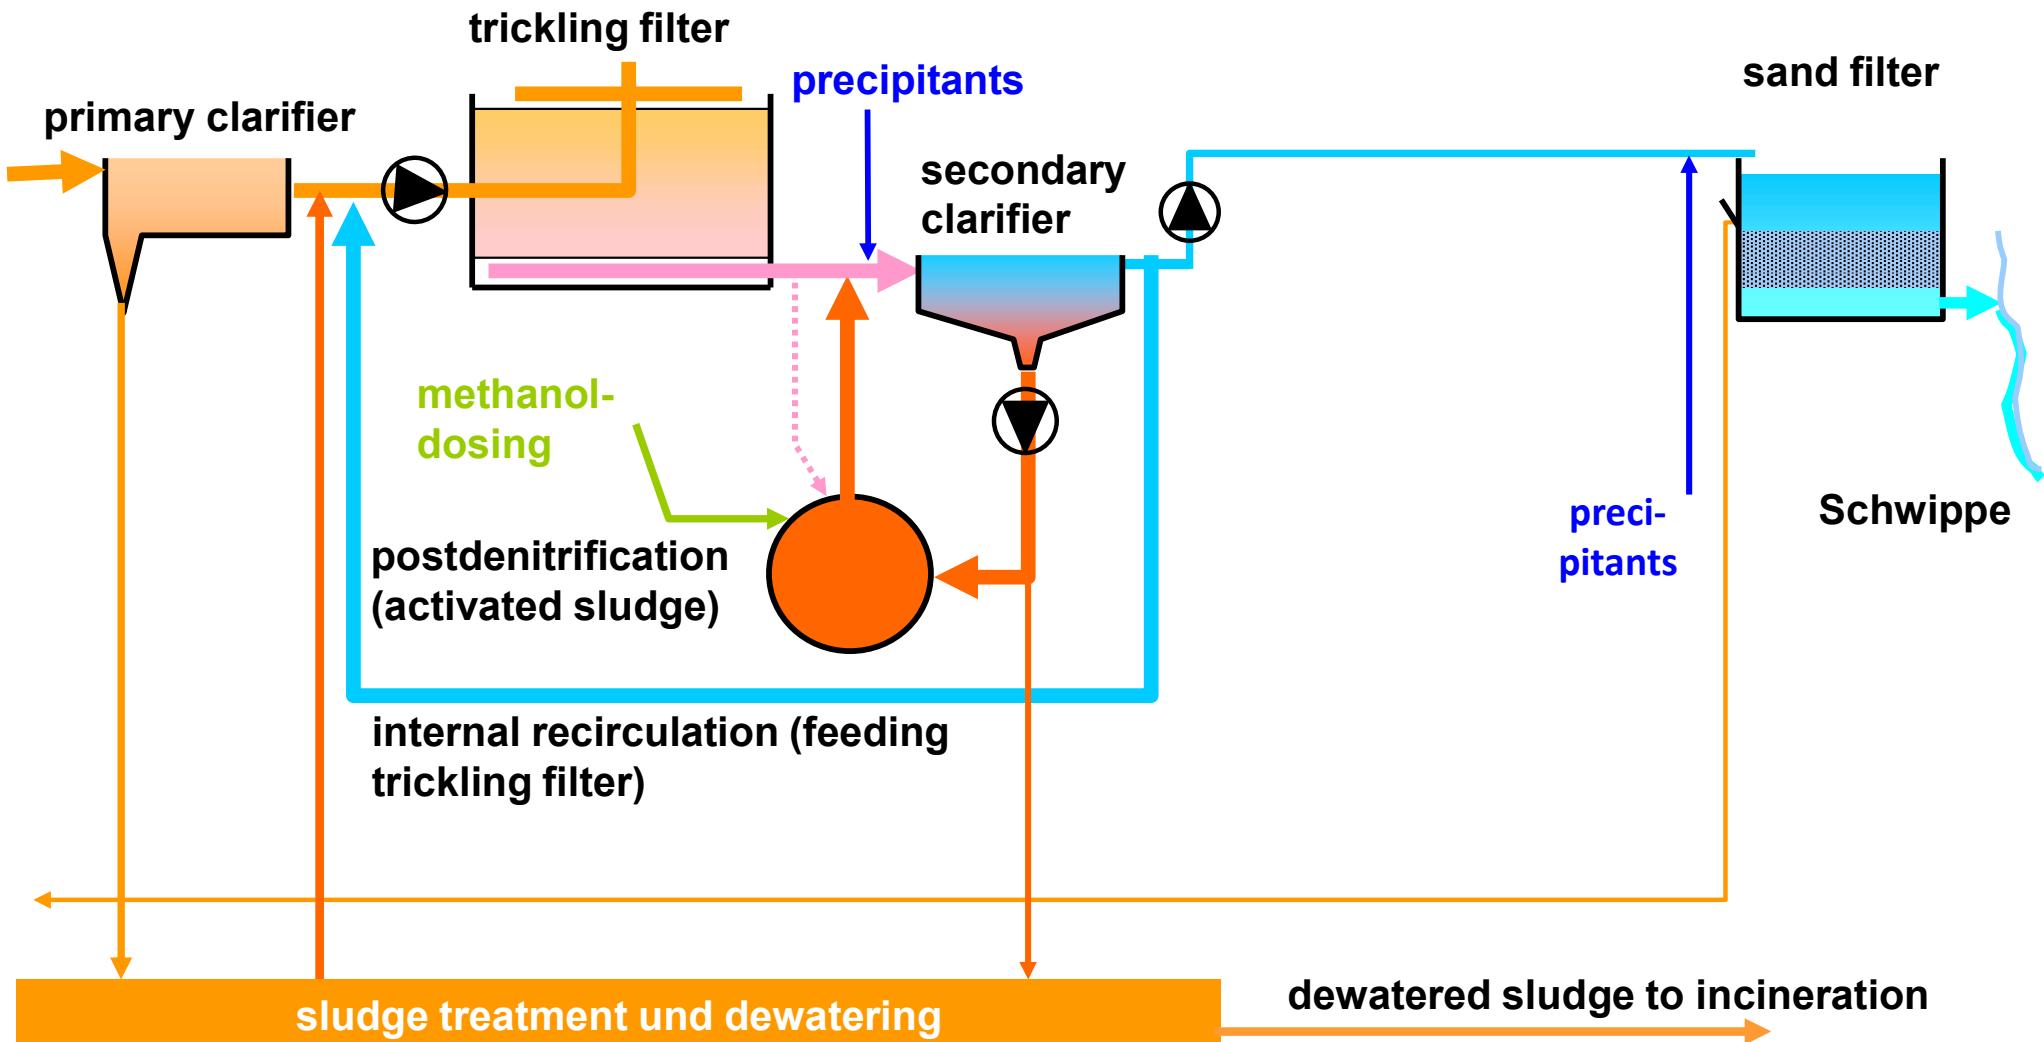

WWTP Böblingen-Sindelfingen

WWTP Böblingen-Sindelfingen	operation data	2020
design capacity	250 000 PE	
current load (calculate with 120 g COD/(PE*d))	173 000 PE	
Influent		
Influent by dry weather	26 000 m³/d	
max. wet weather influent	2 000 l/s 175 000 m³/d	
total annual treated waste water	14 200 000 m³/a	
infiltration water into sewer system	25%	
COD load (average)	20 000 kg/d	
COD load (85%-value)	27 000 kg/d	
Effluent (annual average)		
COD	18 mg/L	
P _{total}	0.2 mg/L	
N _{total} (N _{anorg} + N _{org})	10.3 mg/L	
NH ₄ -N	0.5 mg/L	
Energy		
Consumption of electricity	4 890 763 kWh/a 28.3 kWh/(PE*a)	
Production of electricity with CHP	2 789 570 kWh/a 16.1 kWh/(PE*a)	

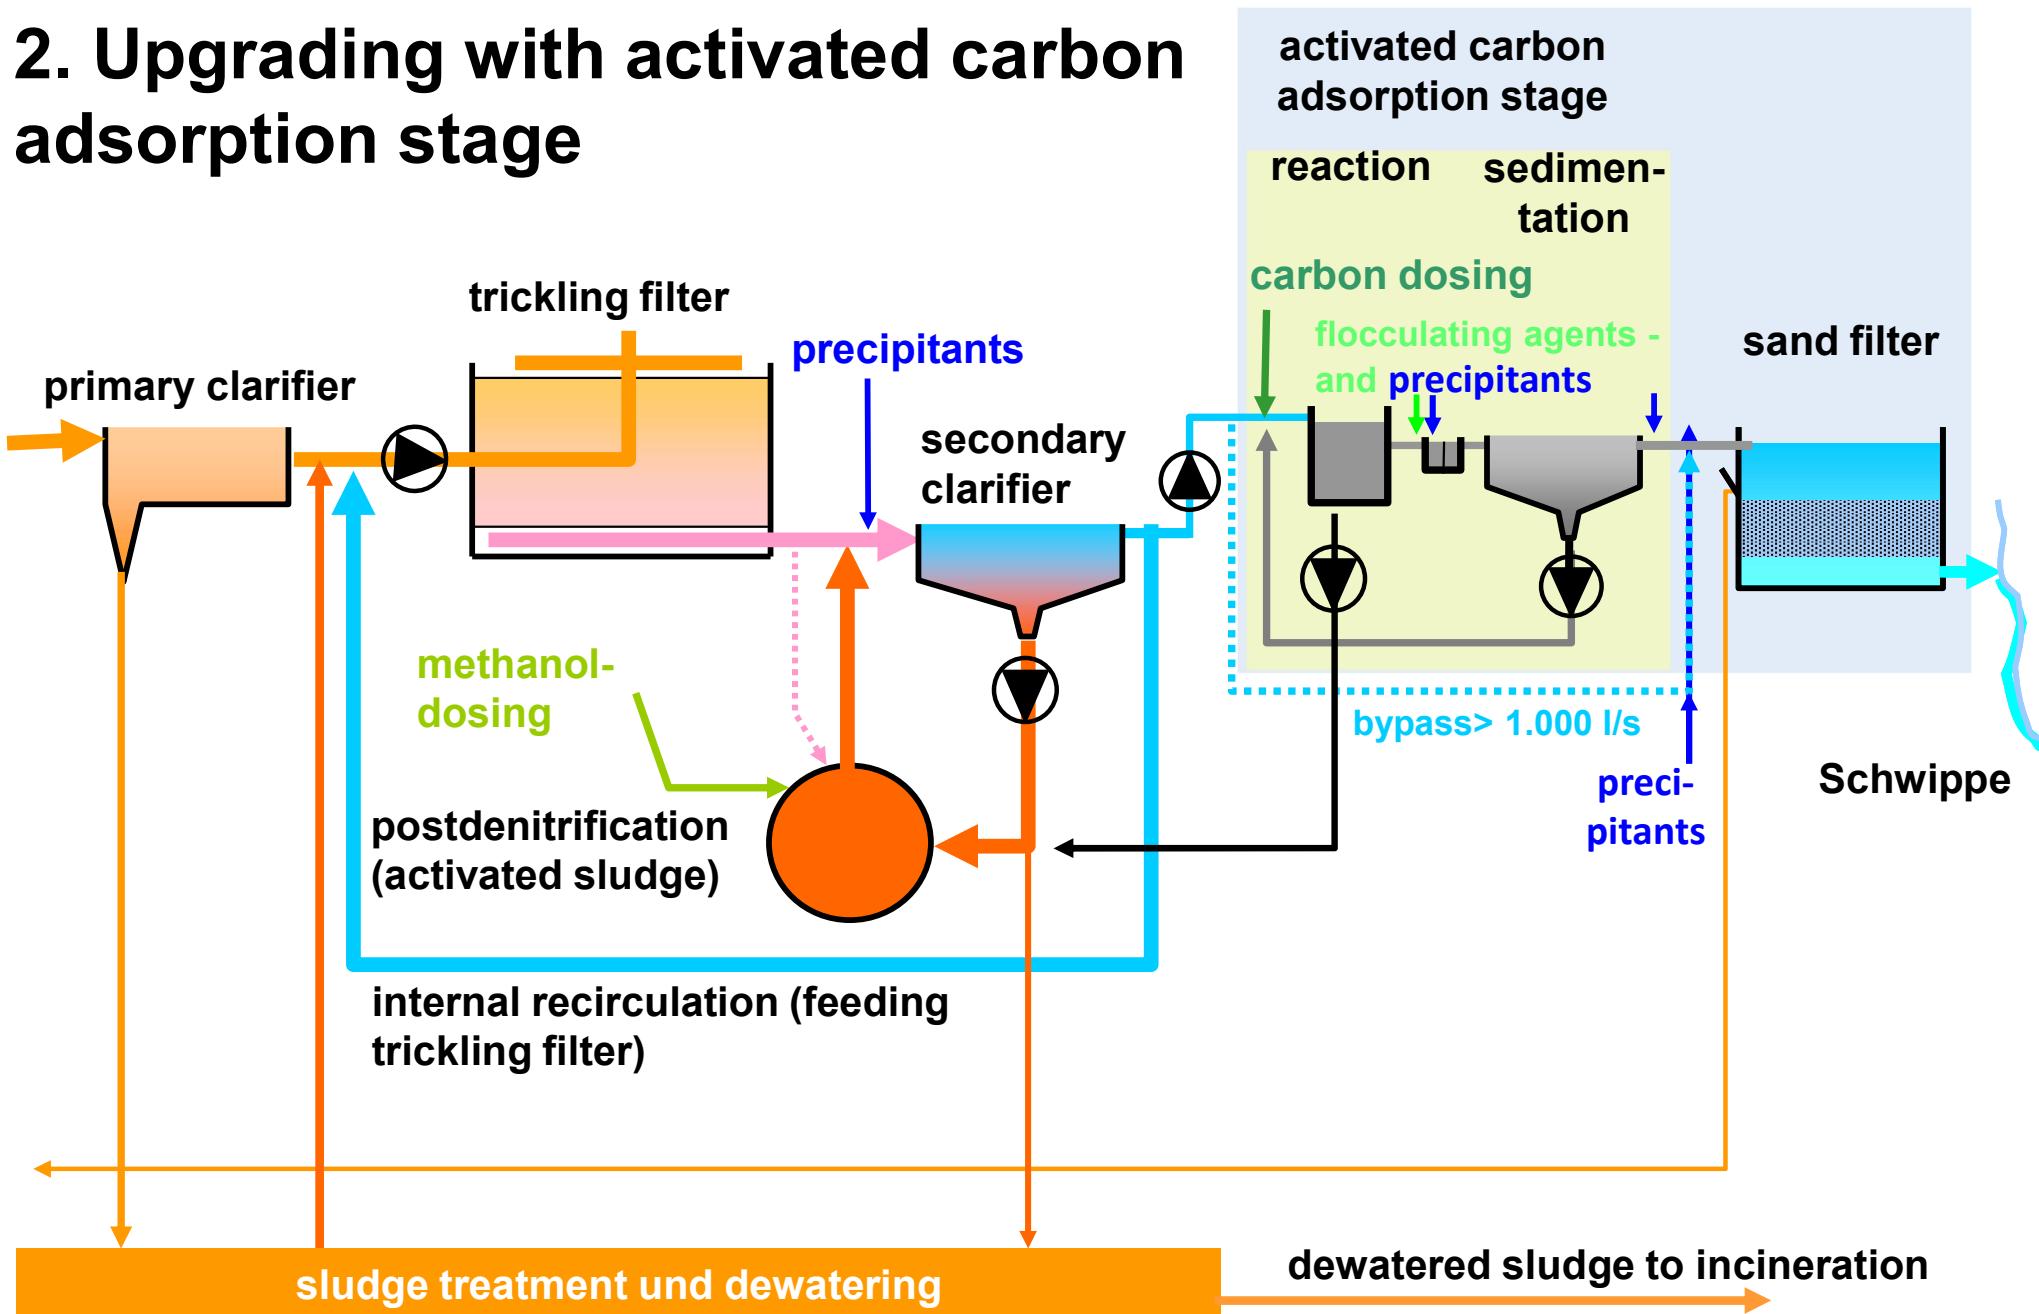

2. Upgrading with activated carbon adsorption stage

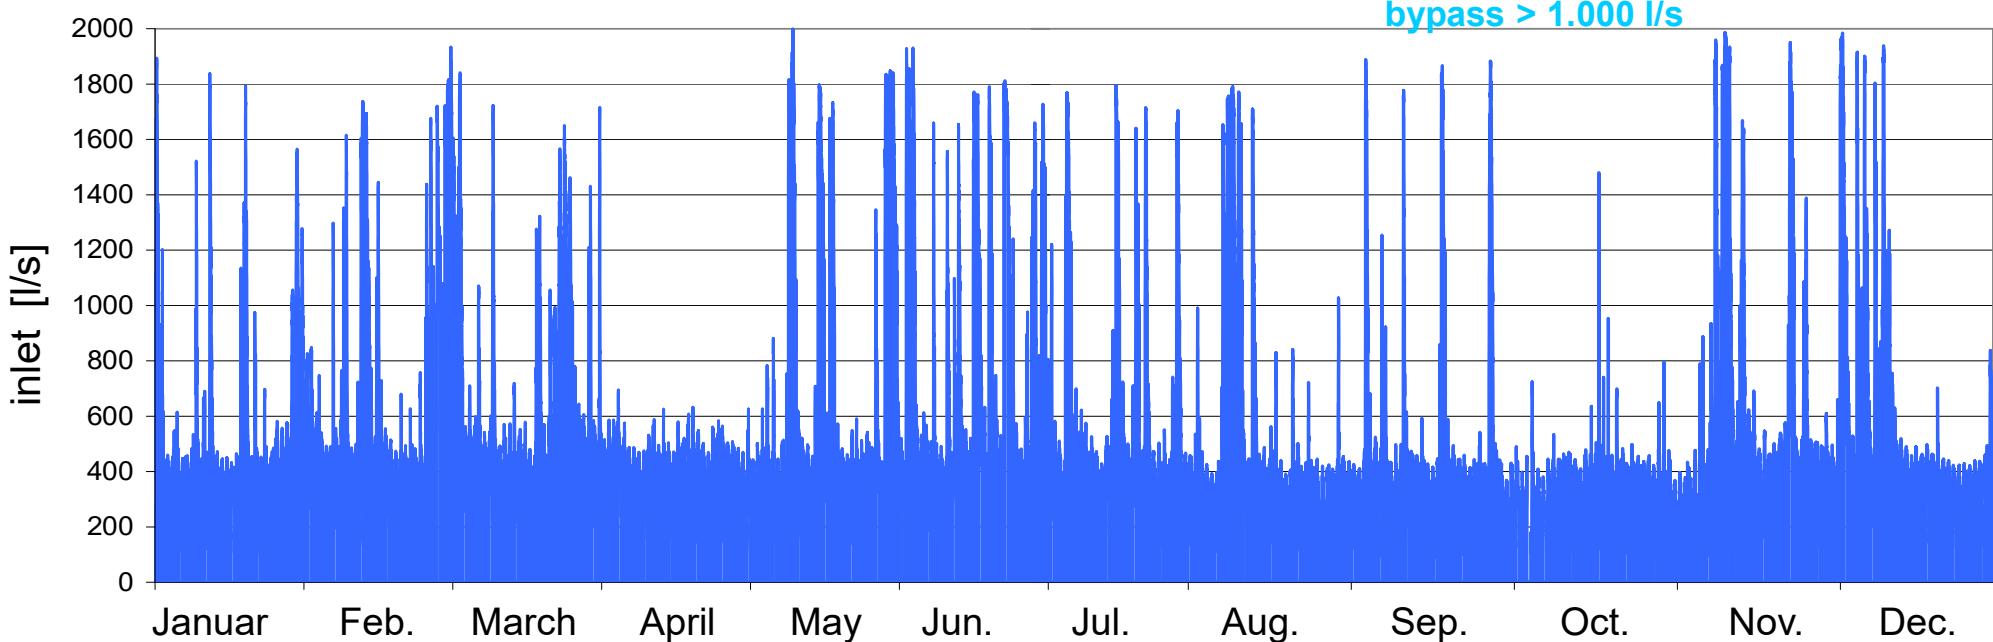

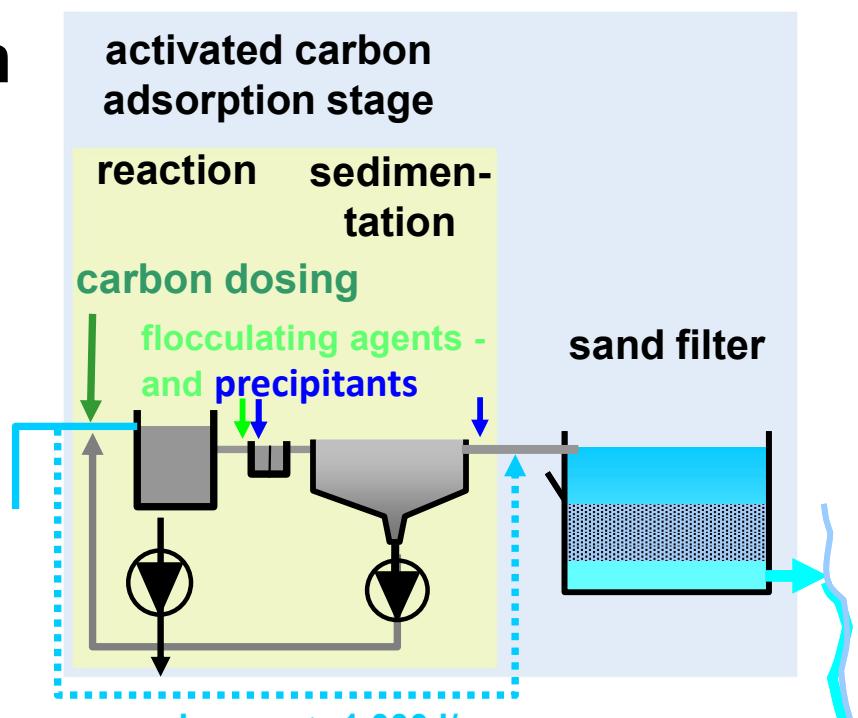

2. Upgrading with activated carbon adsorption stage

2. Upgrading with activated carbon adsorption stage

design parameters

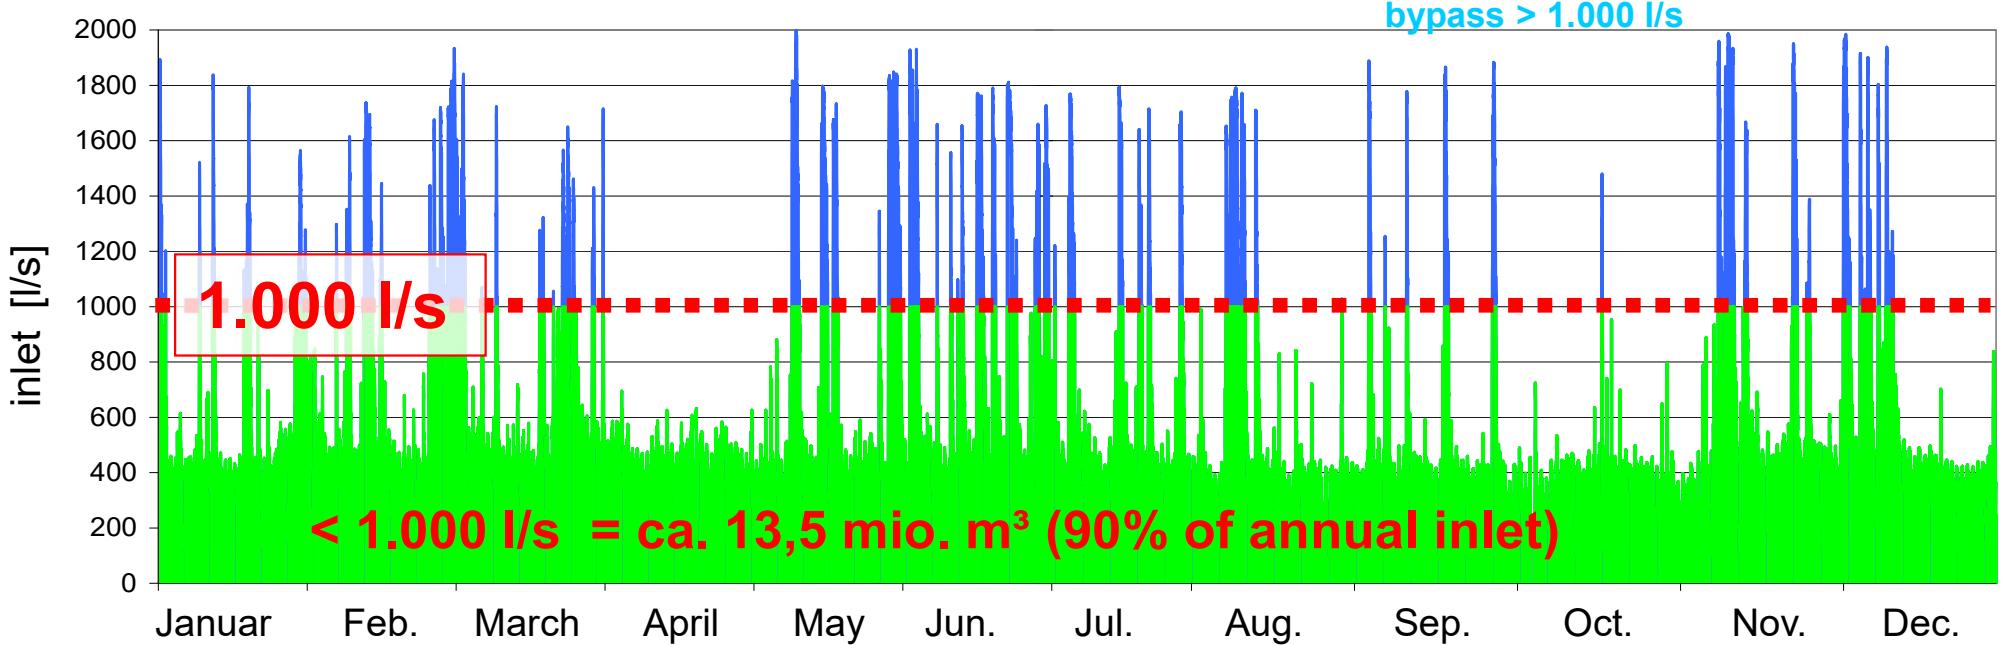

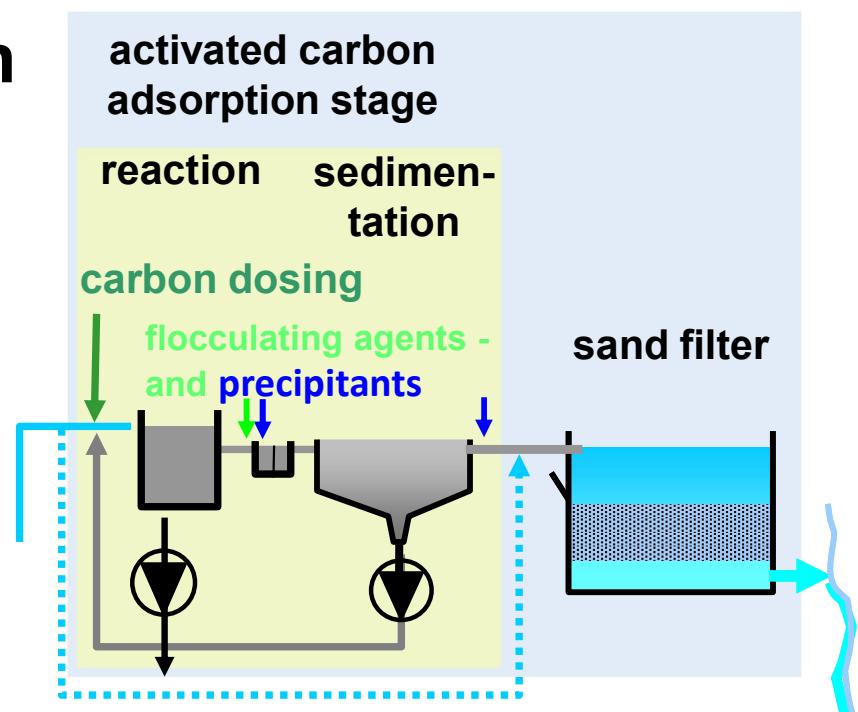

- reaction tank:
retention time 0.5 hour
- sedimentation tank:
retention time 2.0 hours
surface load 2.0 m/h

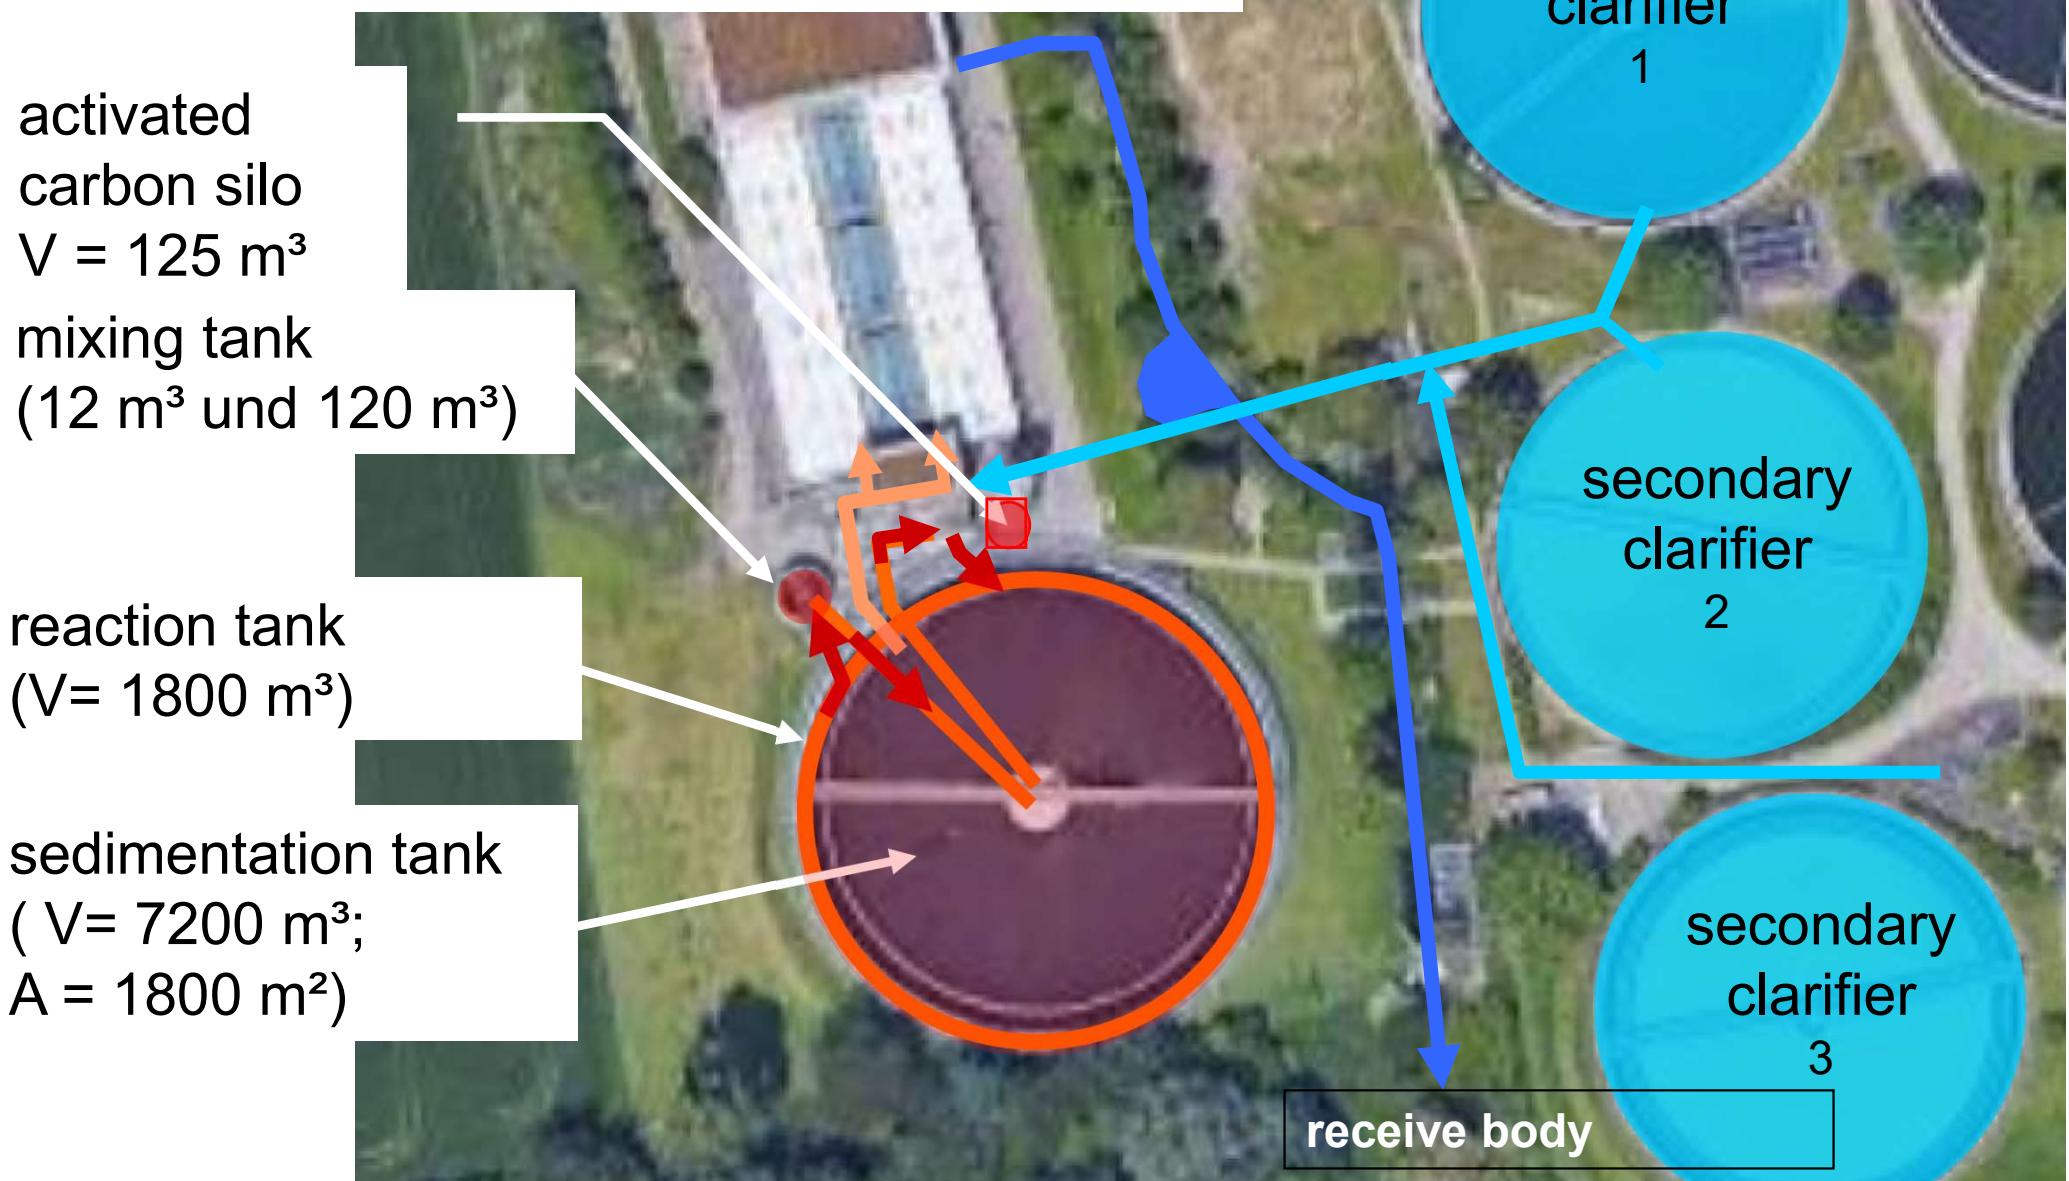

2. Upgrading with activated carbon adsorption stage

design parameters

- reaction tank:
retention time 0.5 hour
- sedimentation tank:
retention time 2.0 hours
surface load 2.0 m/h

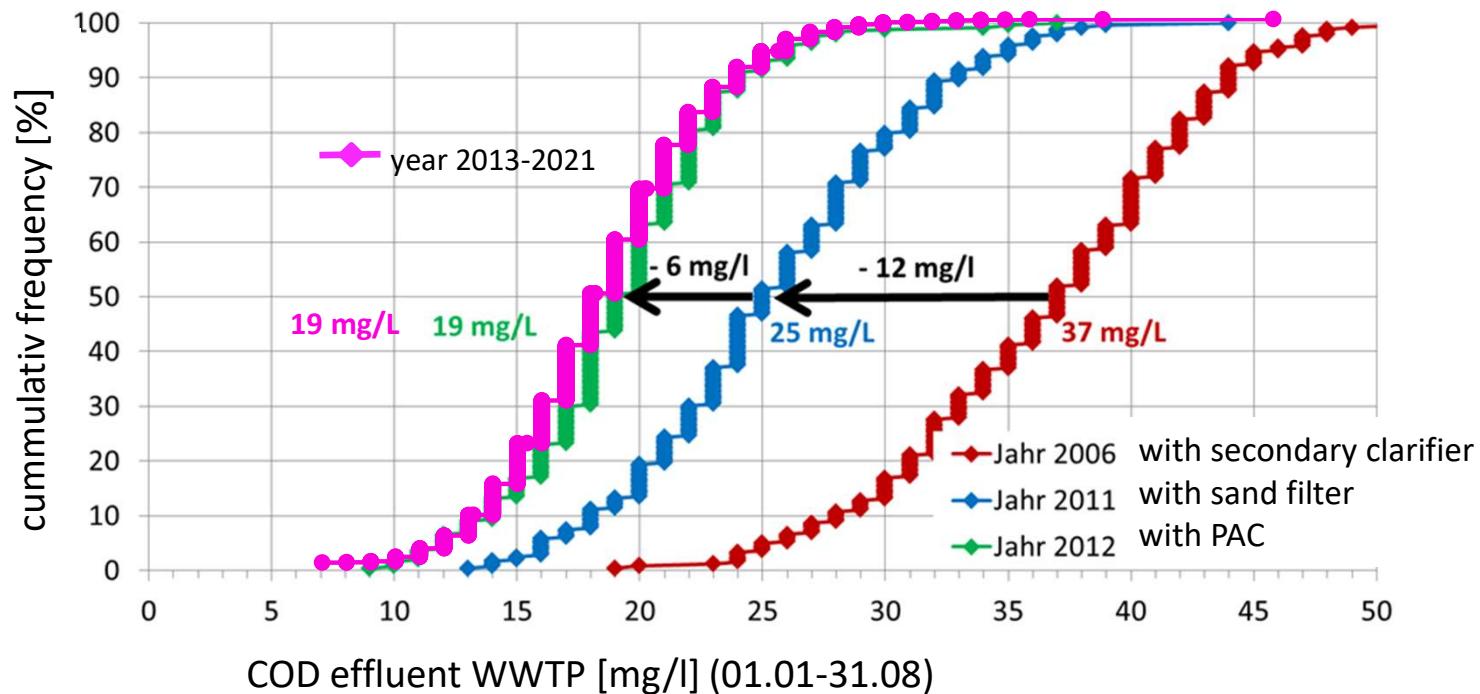

2. Upgrading with activated carbon adsorption stage

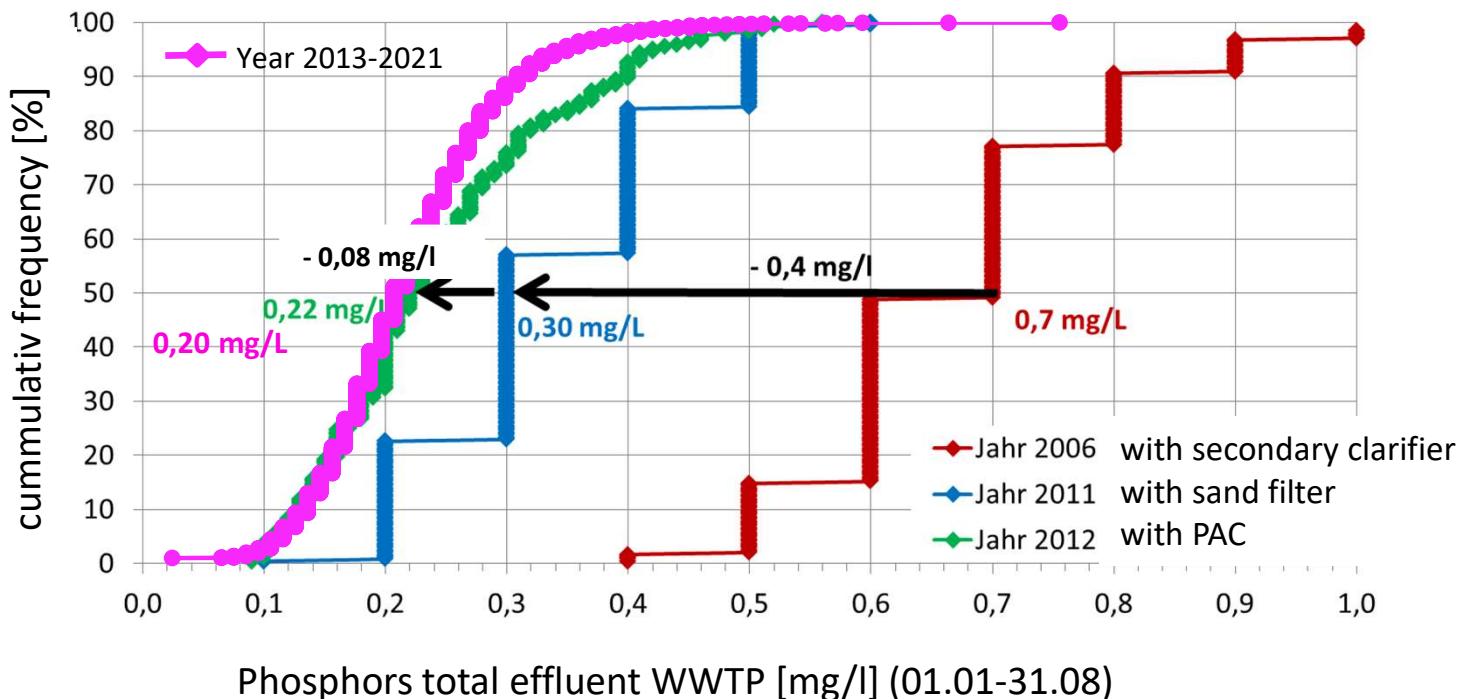

3. Elimination Efficiency

- operation of sand filter reduced COD!
- operation of activated carbon adsorption stage reduced COD!
- discharge below 20 mg/l of COD in average with 10 g PAC/m³ !

3. Elimination Efficiency

precipitant dosing (FeClSO_4):

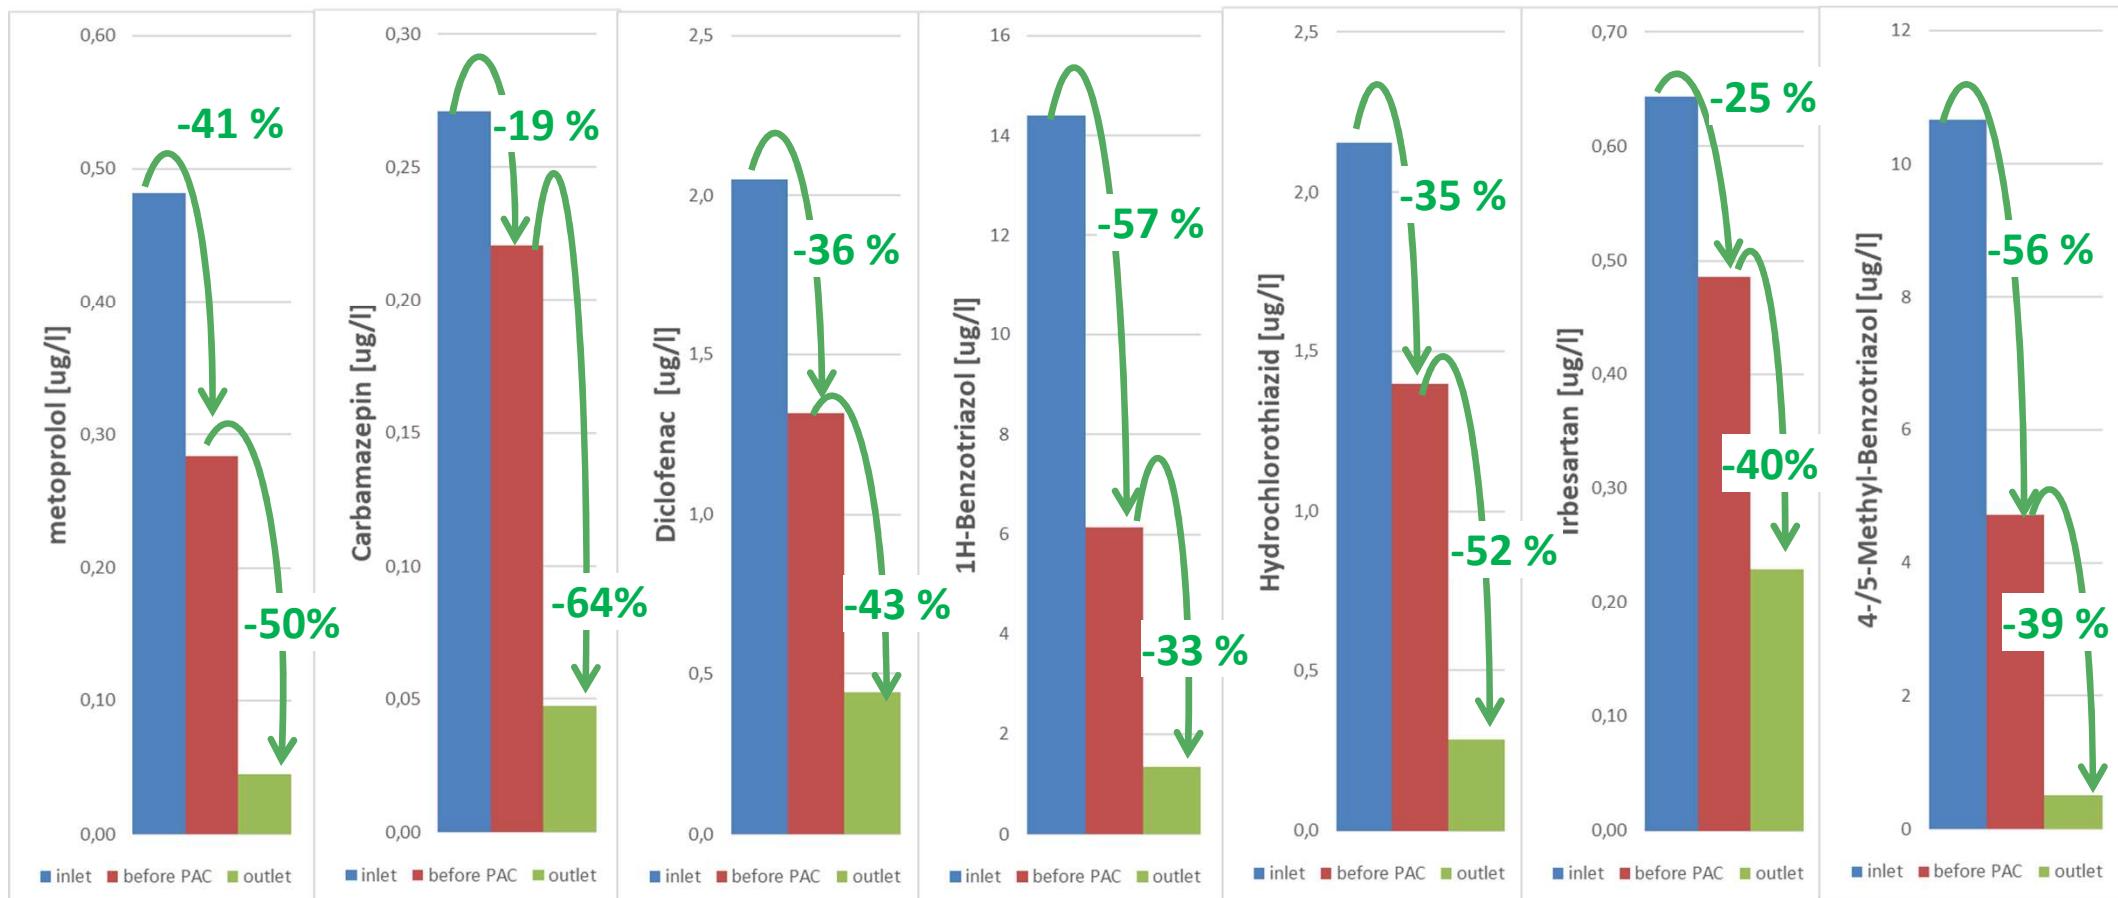

2006:	: 7 151 kg/d , $\beta = 1.83$
2011:	: 4 499 kg/d , $\beta = 1.32$
Jan. bis Aug. 2012	: 4 264 kg/d , $\beta = 1.20$
2013-2021	: 4 014 kg/d , $\beta = 1.17$

reducing of the
precipitant consumption
with operation of PAC

3. Elimination Efficiency

Inlet
before PAC
outlet

total: -91%

-83%

-79%

-90%

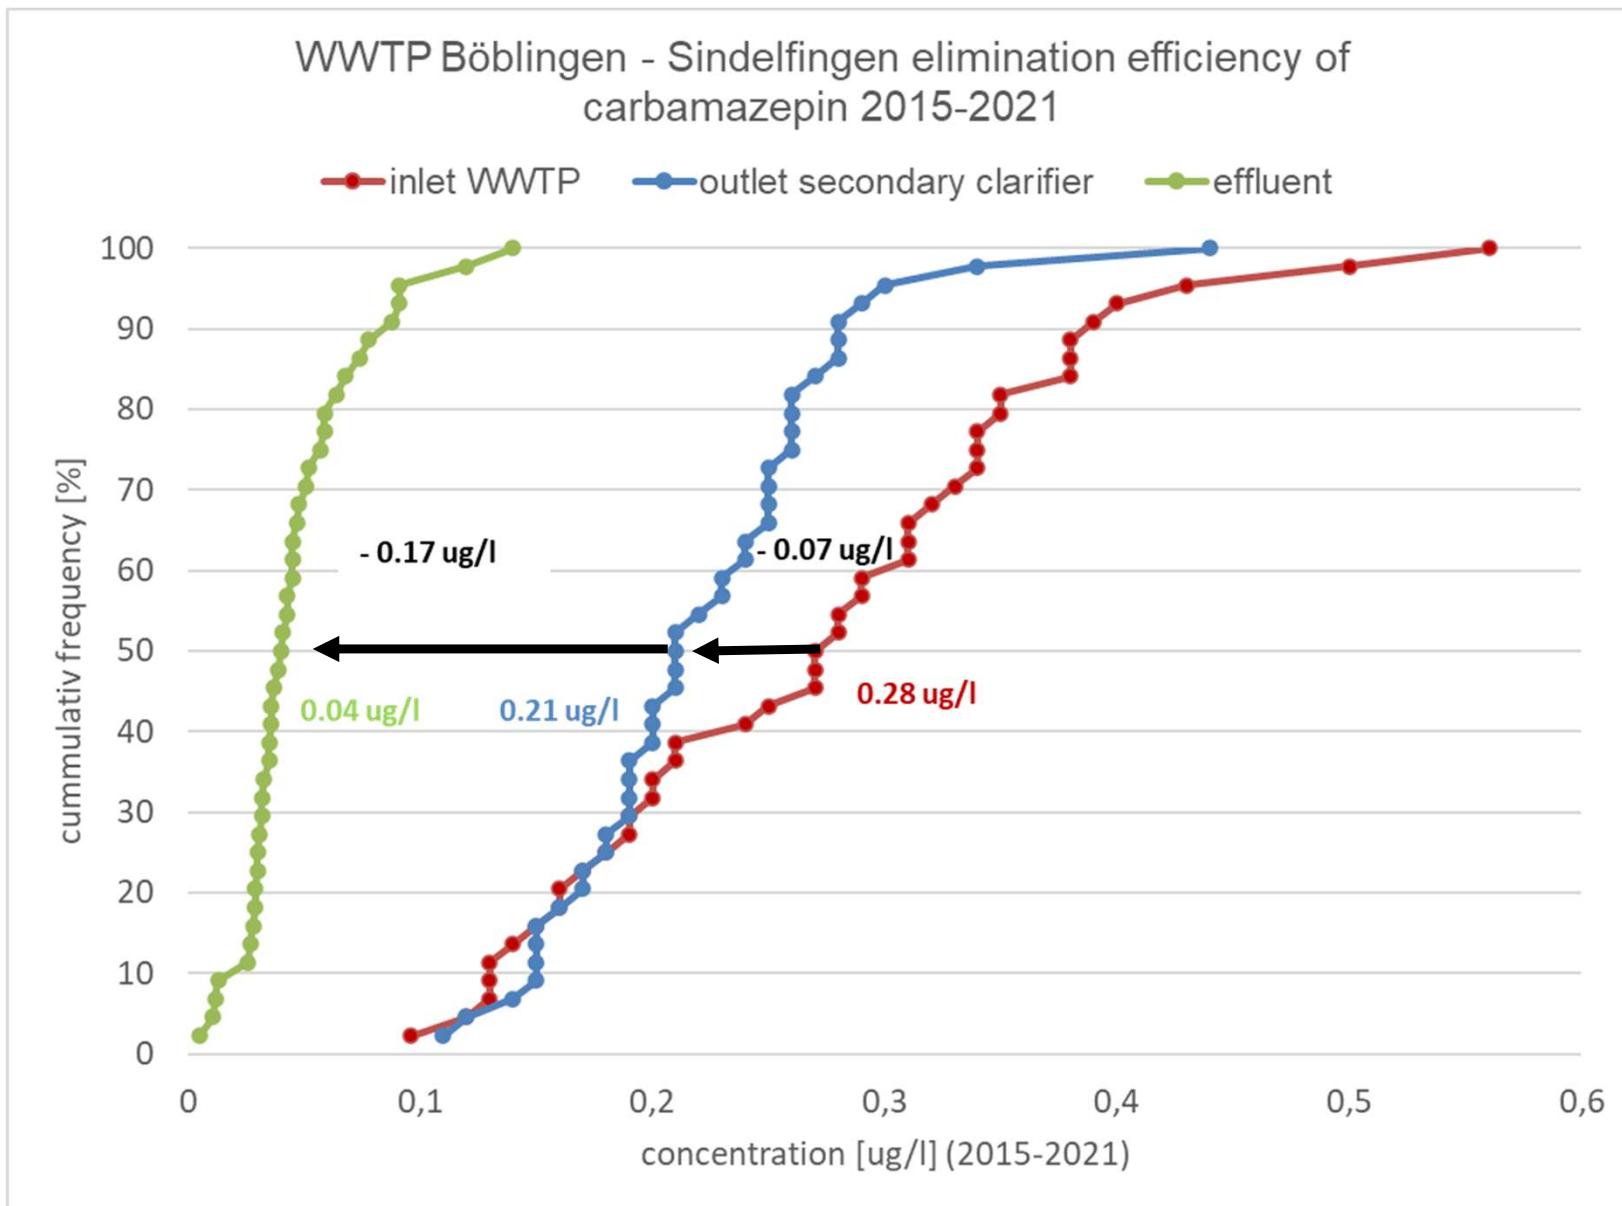

-87%

-65%

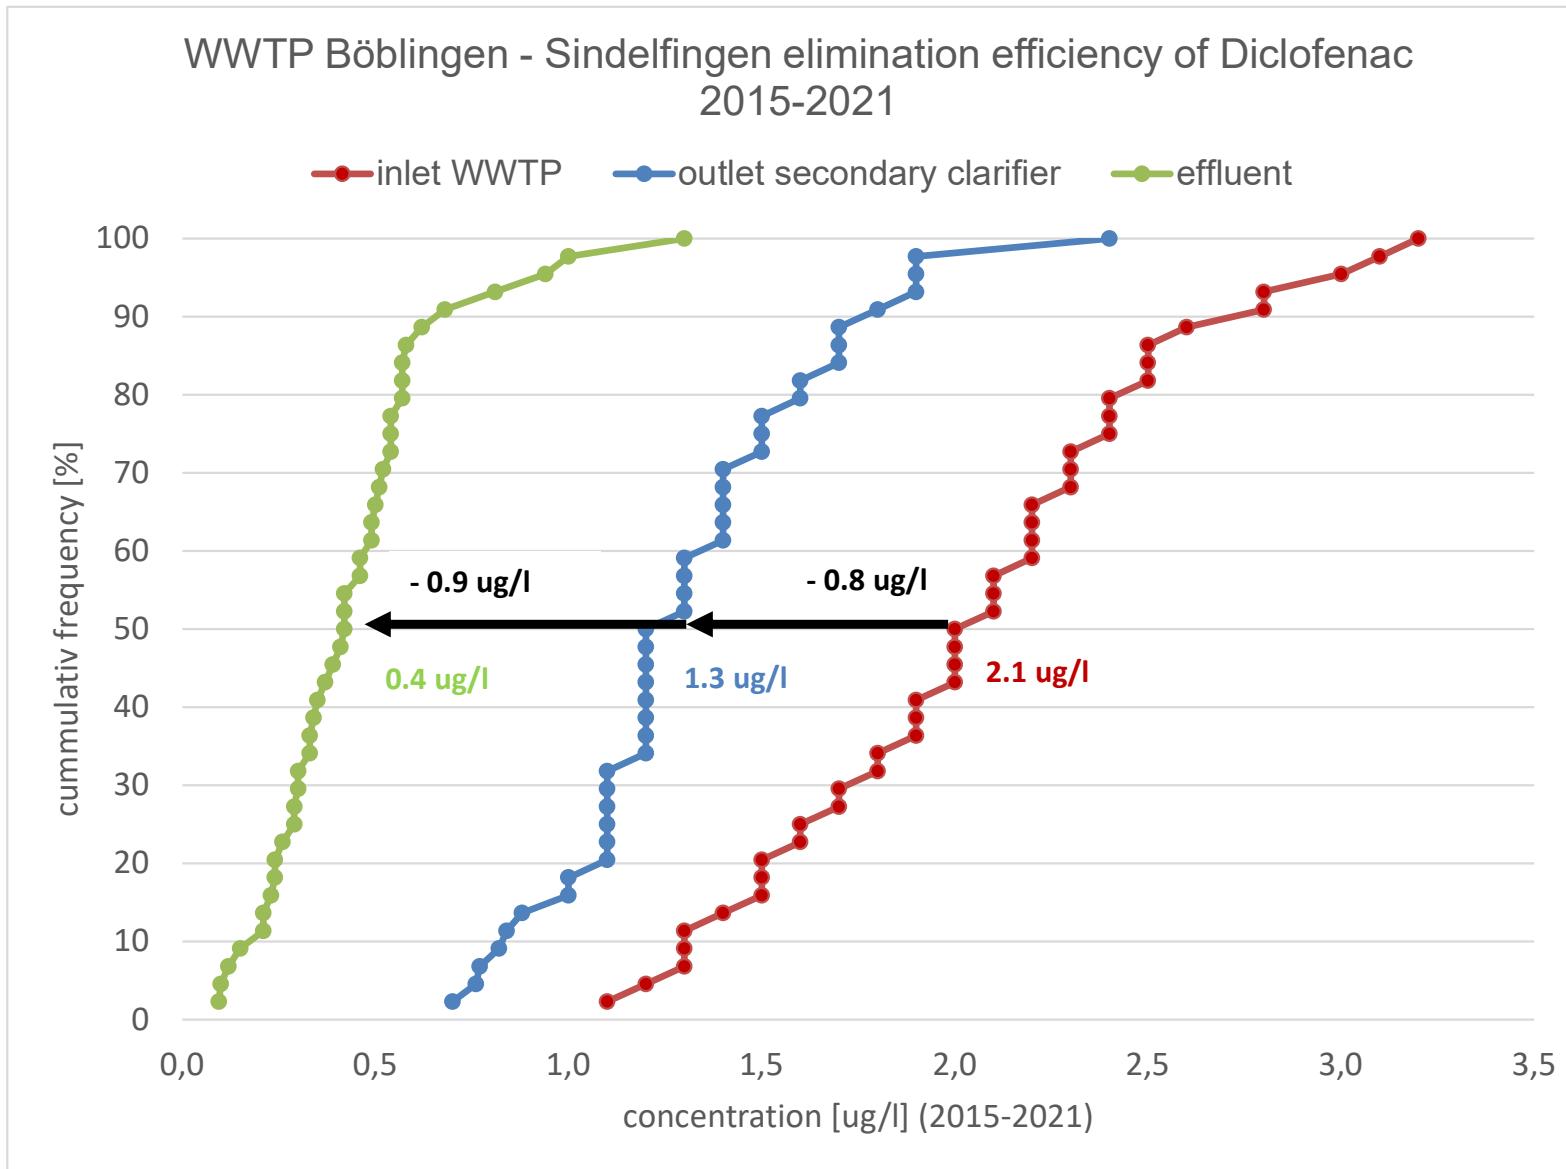

-95%

**elimination of micropollutants from 2015 until 2021
with PAC dosing of 10 mg/l in average**

3. Elimination Efficiency

3. Elimination Efficiency

WWTP Dagersheim-Darmsheim

1. Introduction of the existing WWTP

WWTP Dagersheim-Darmsheim

Elimination of micropollutants with granulated activated carbon (GAC)

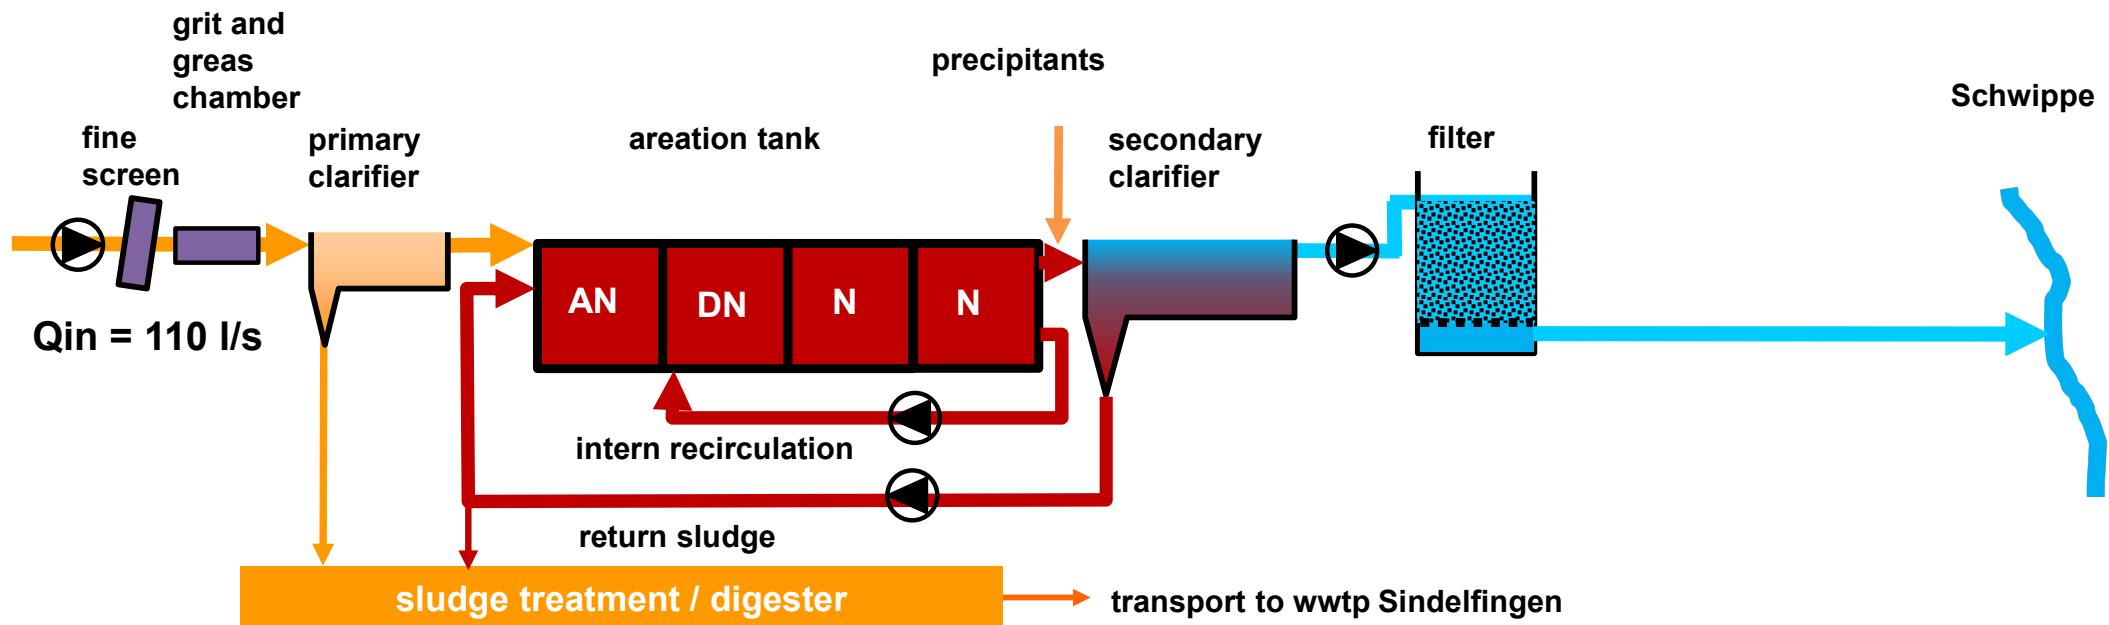

Construction project

- restructuring pumping station of the filter
- new piping connection with 4. treatment stage
- construction of a granulated activated carbon plant within the new building
- construction of a new GAC delivery area
- measurement and automatisation system

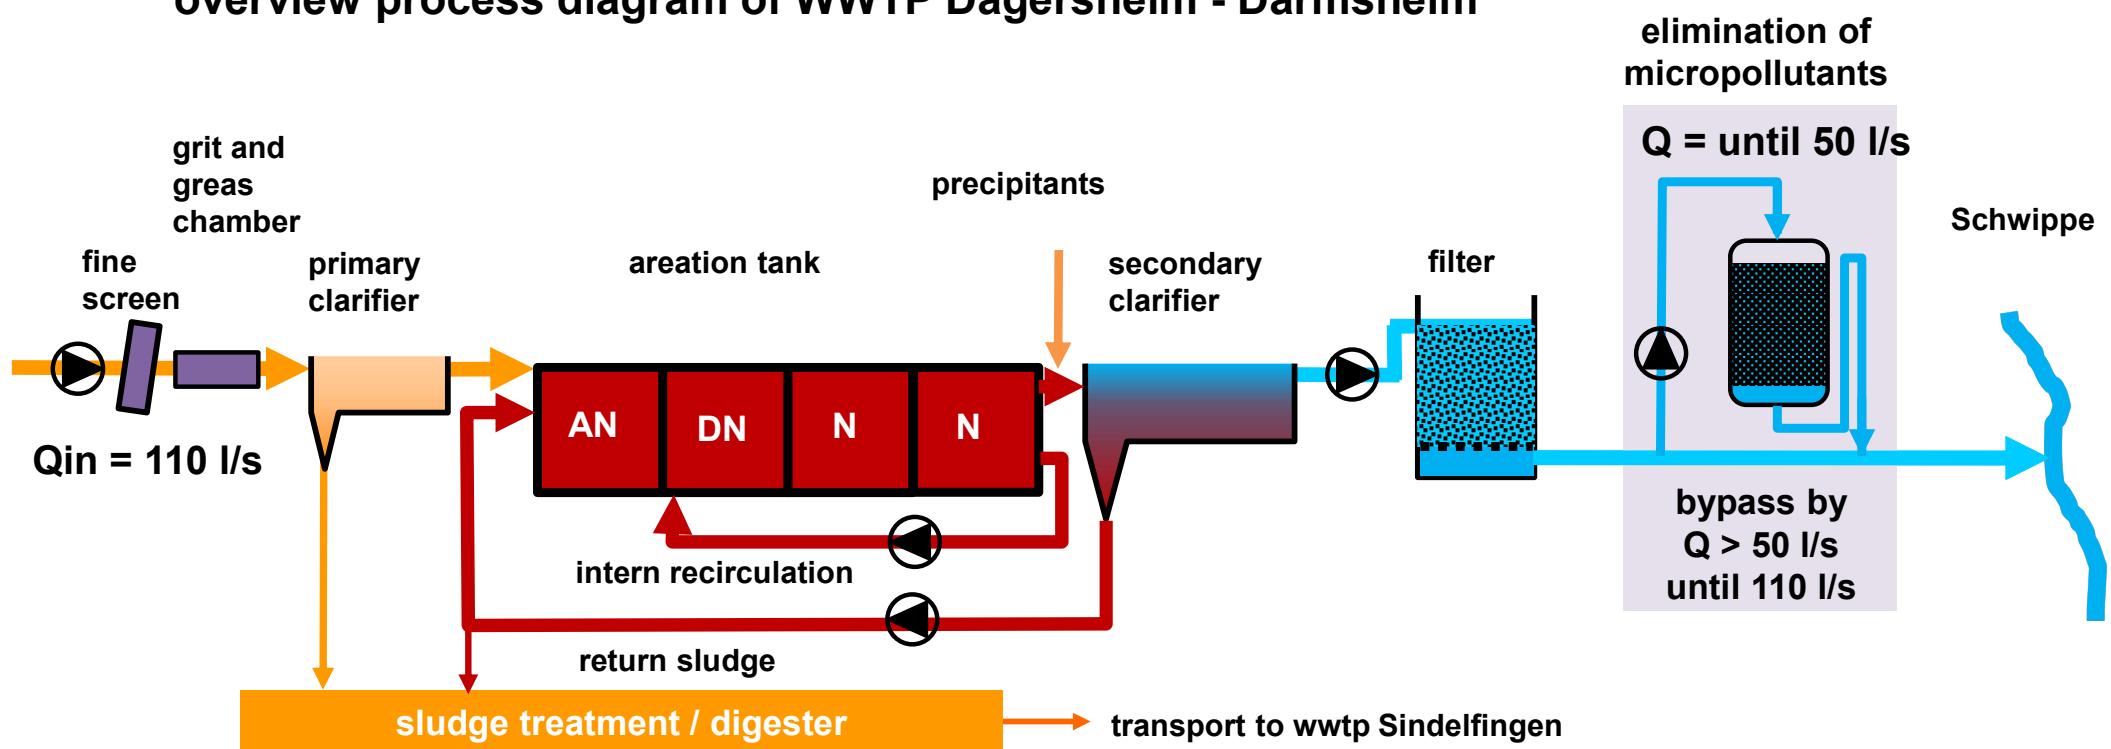

2. Upgrading with activated carbon adsorption stage

overview process diagram of WWTP Dagersheim - Darmsheim

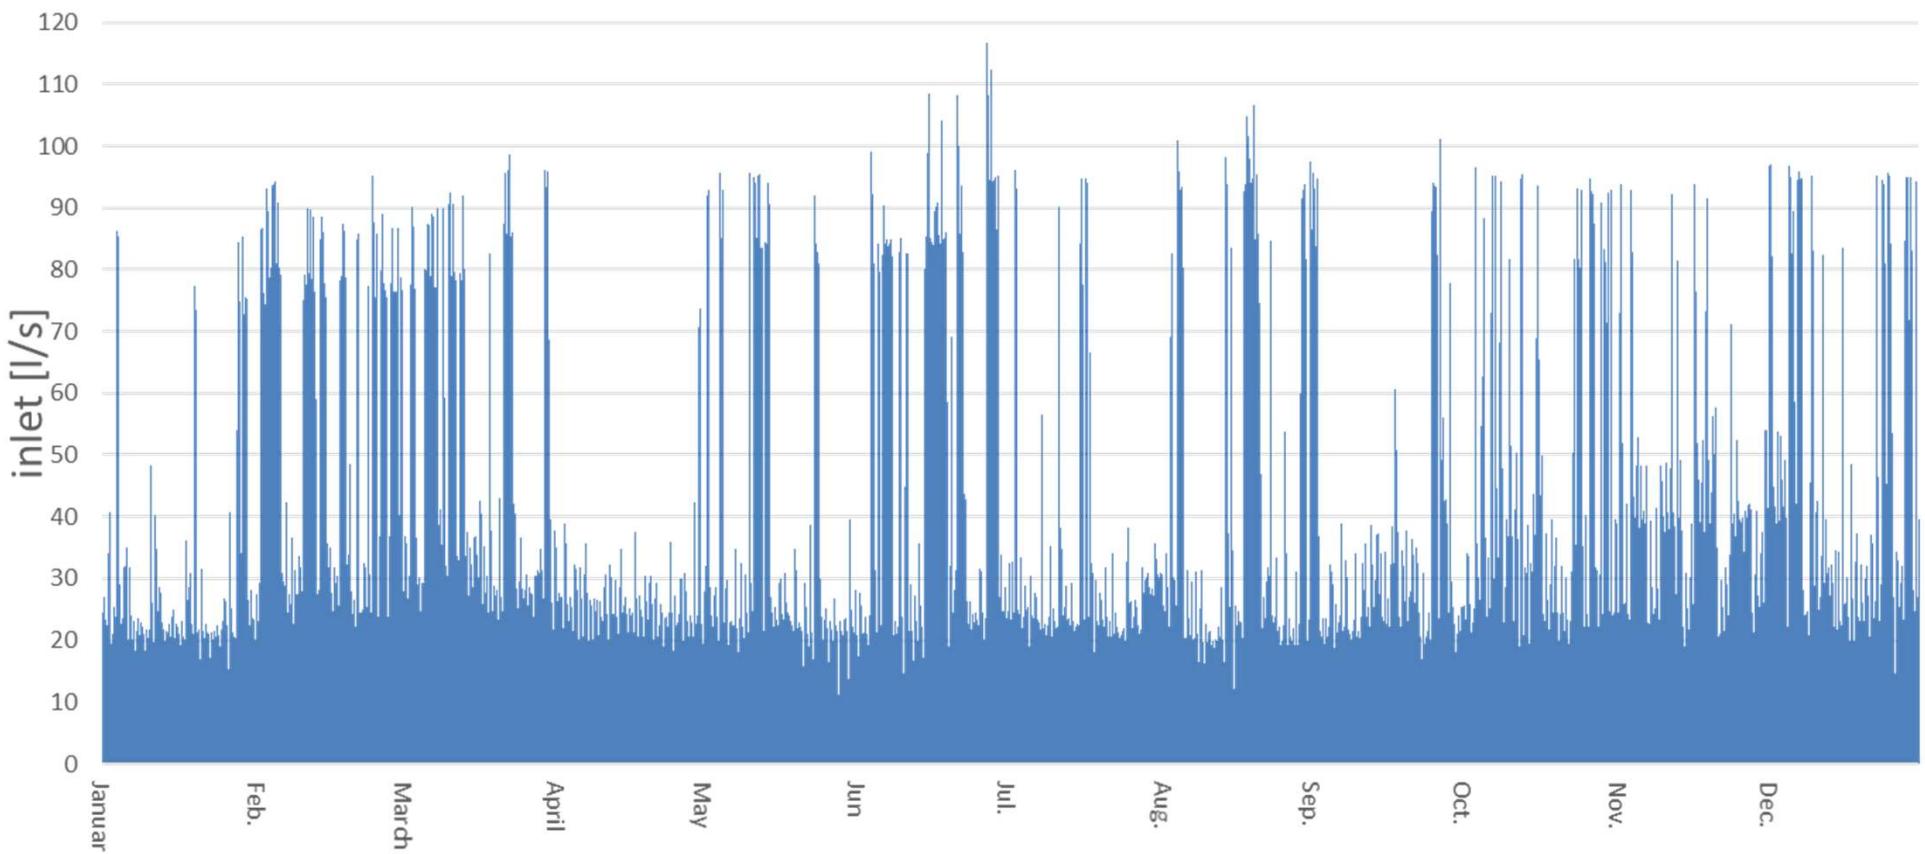

2. Upgrading with activated carbon adsorption stage

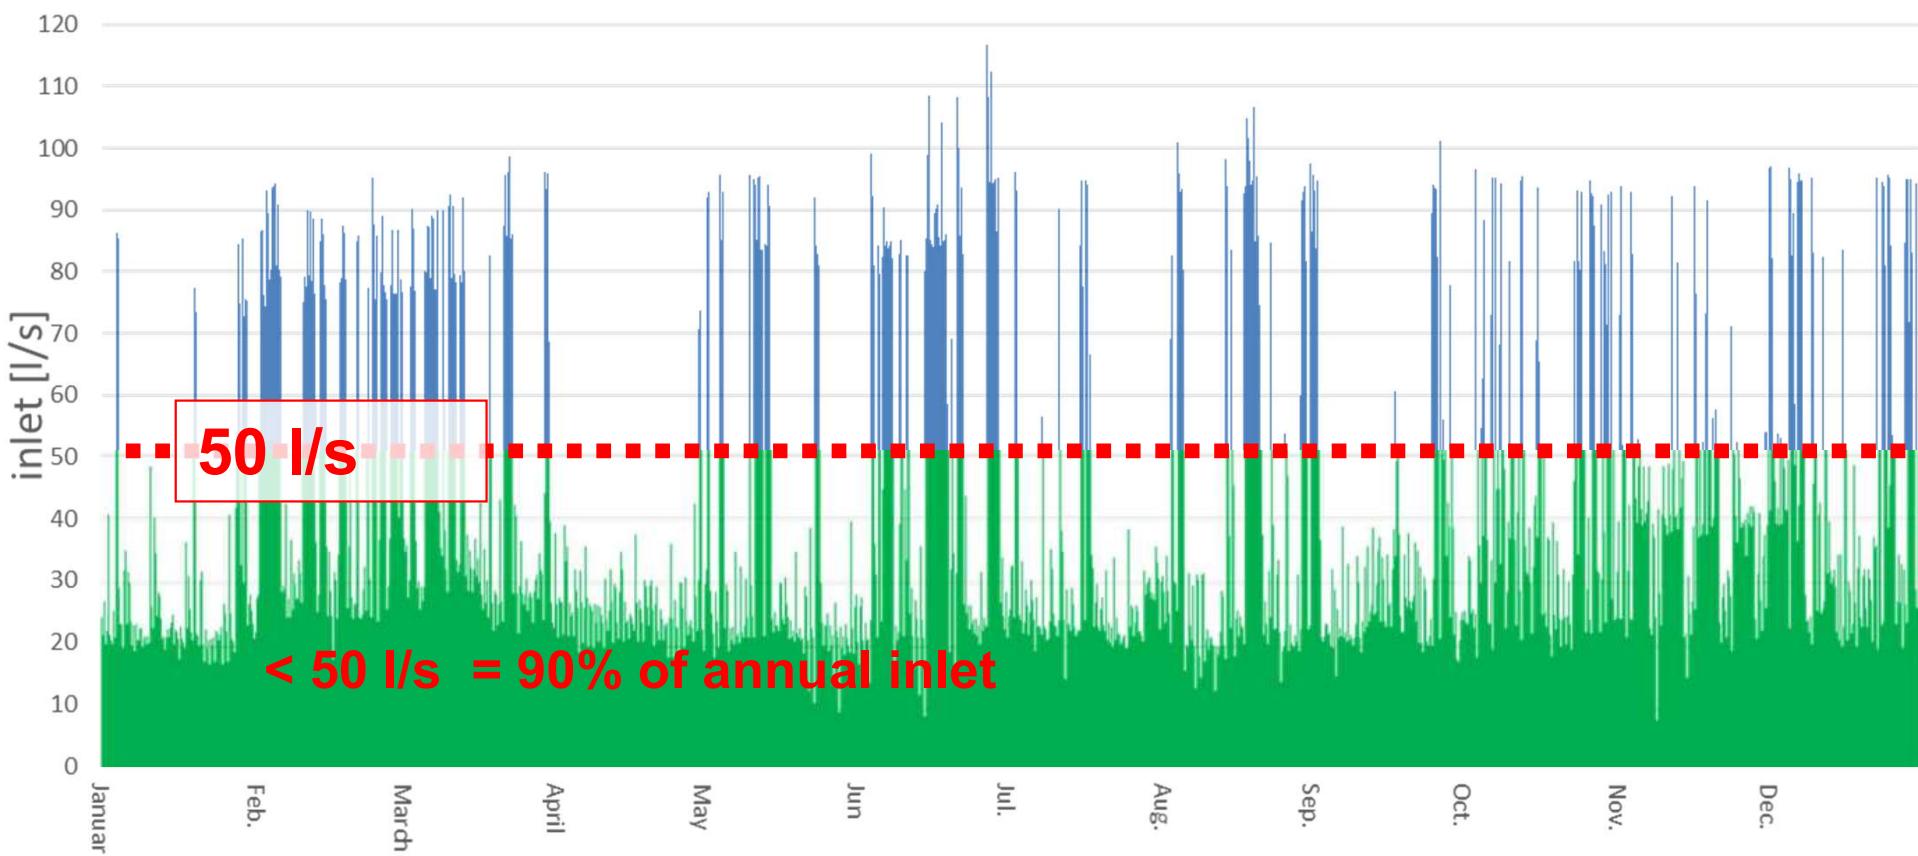

overview process diagram of WWTP Dagersheim - Darmsheim

2. Upgrading with activated carbon adsorption stage

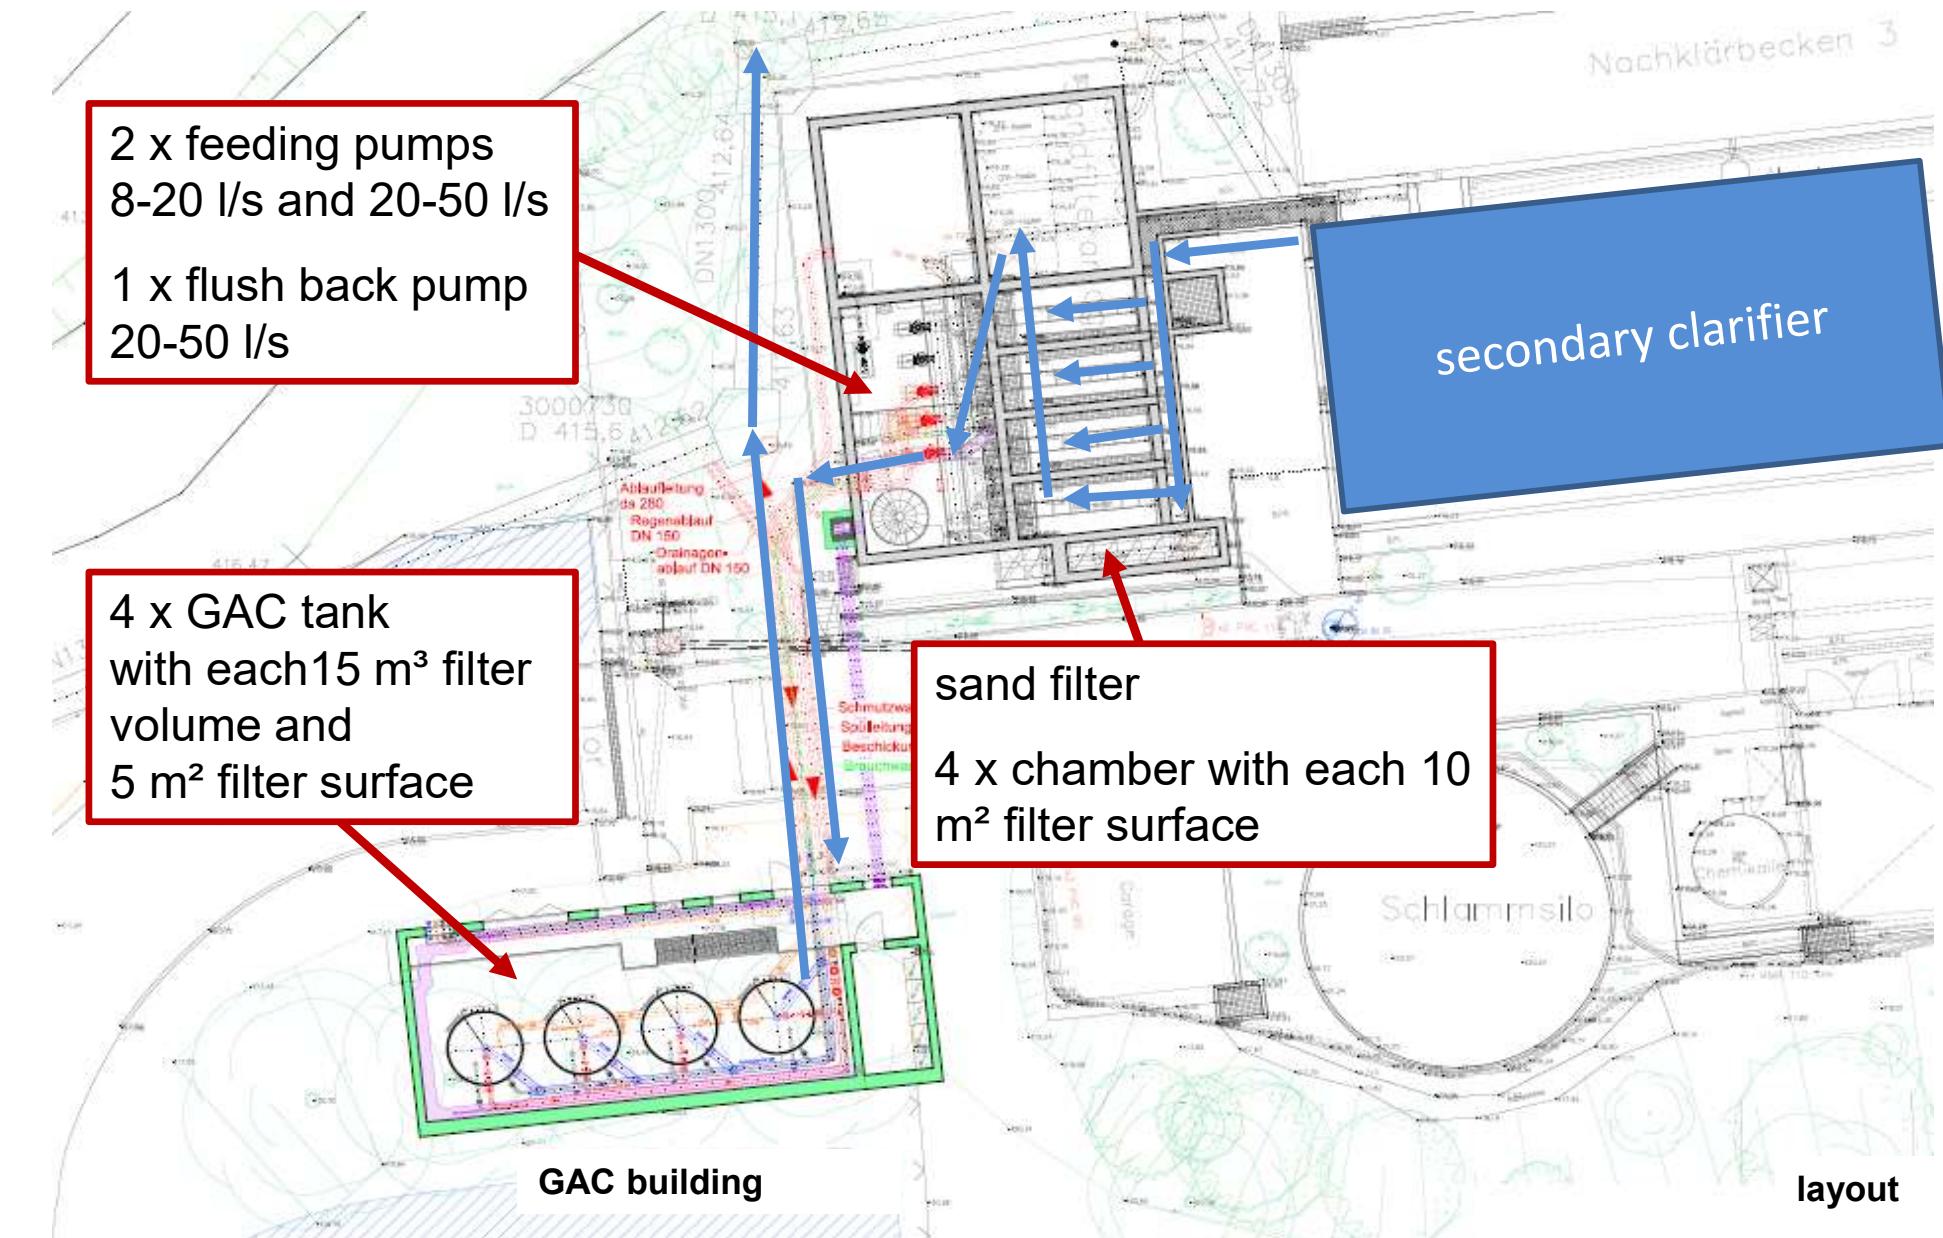

2. Upgrading with activated carbon adsorption stage

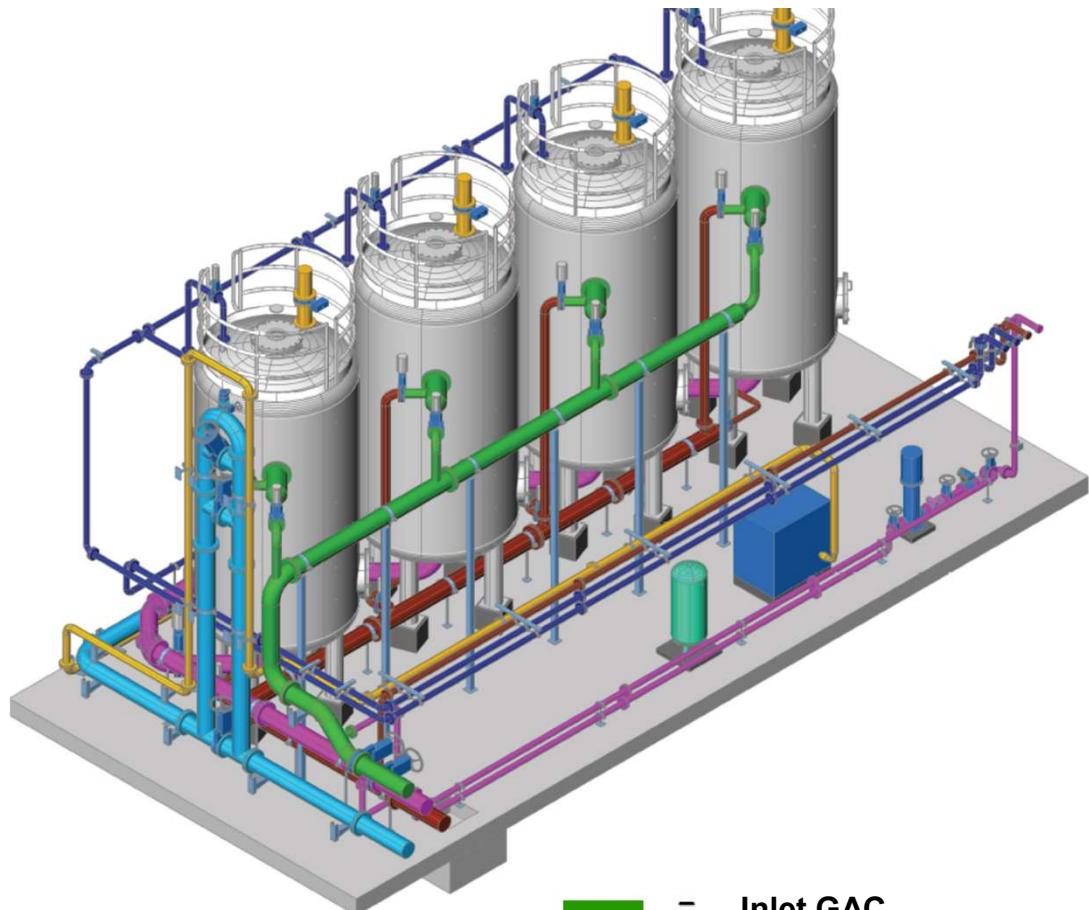

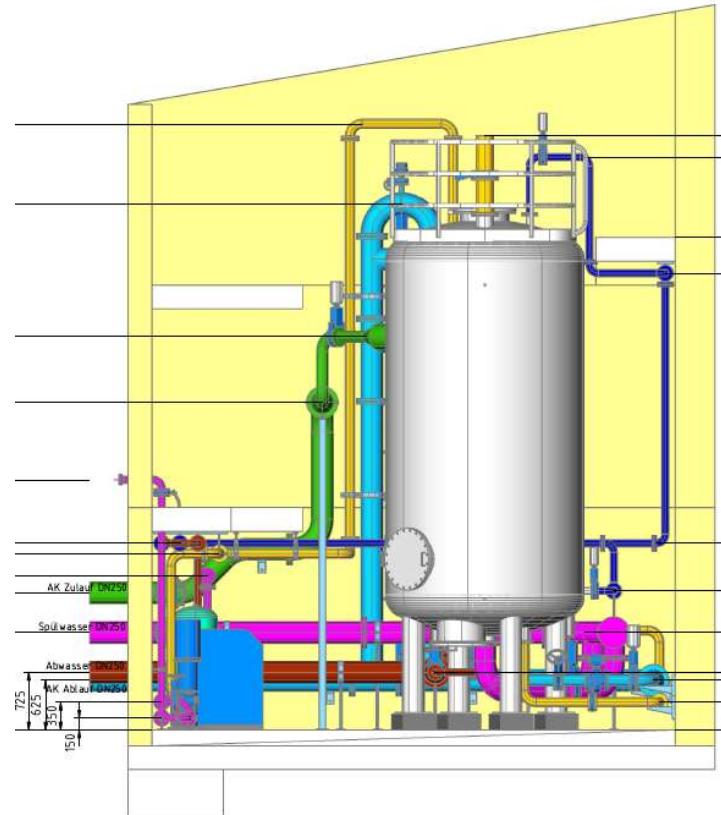

WWTP Dagersheim-Darmsheim

Elimination of micropollutants with granulated activated carbon (GAC)

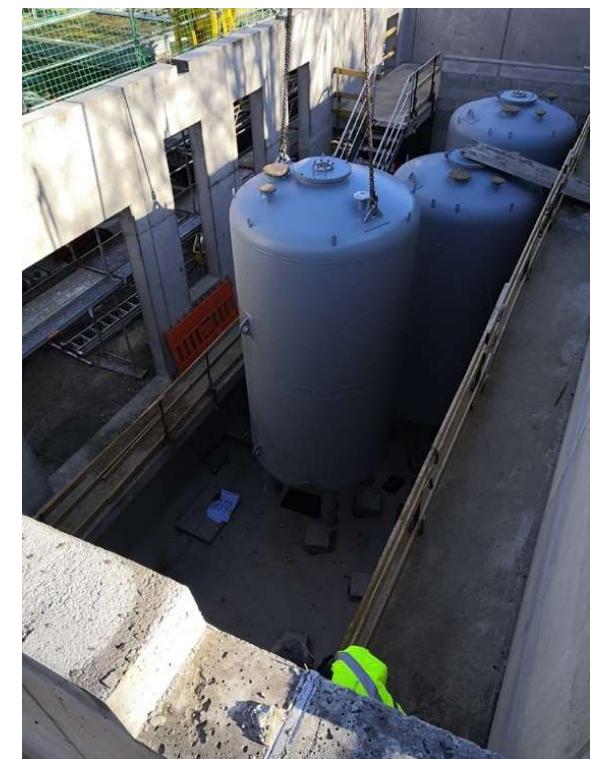

WWTP Dagersheim-Darmsheim

Elimination of micropollutants with granulated activated carbon (GAC)

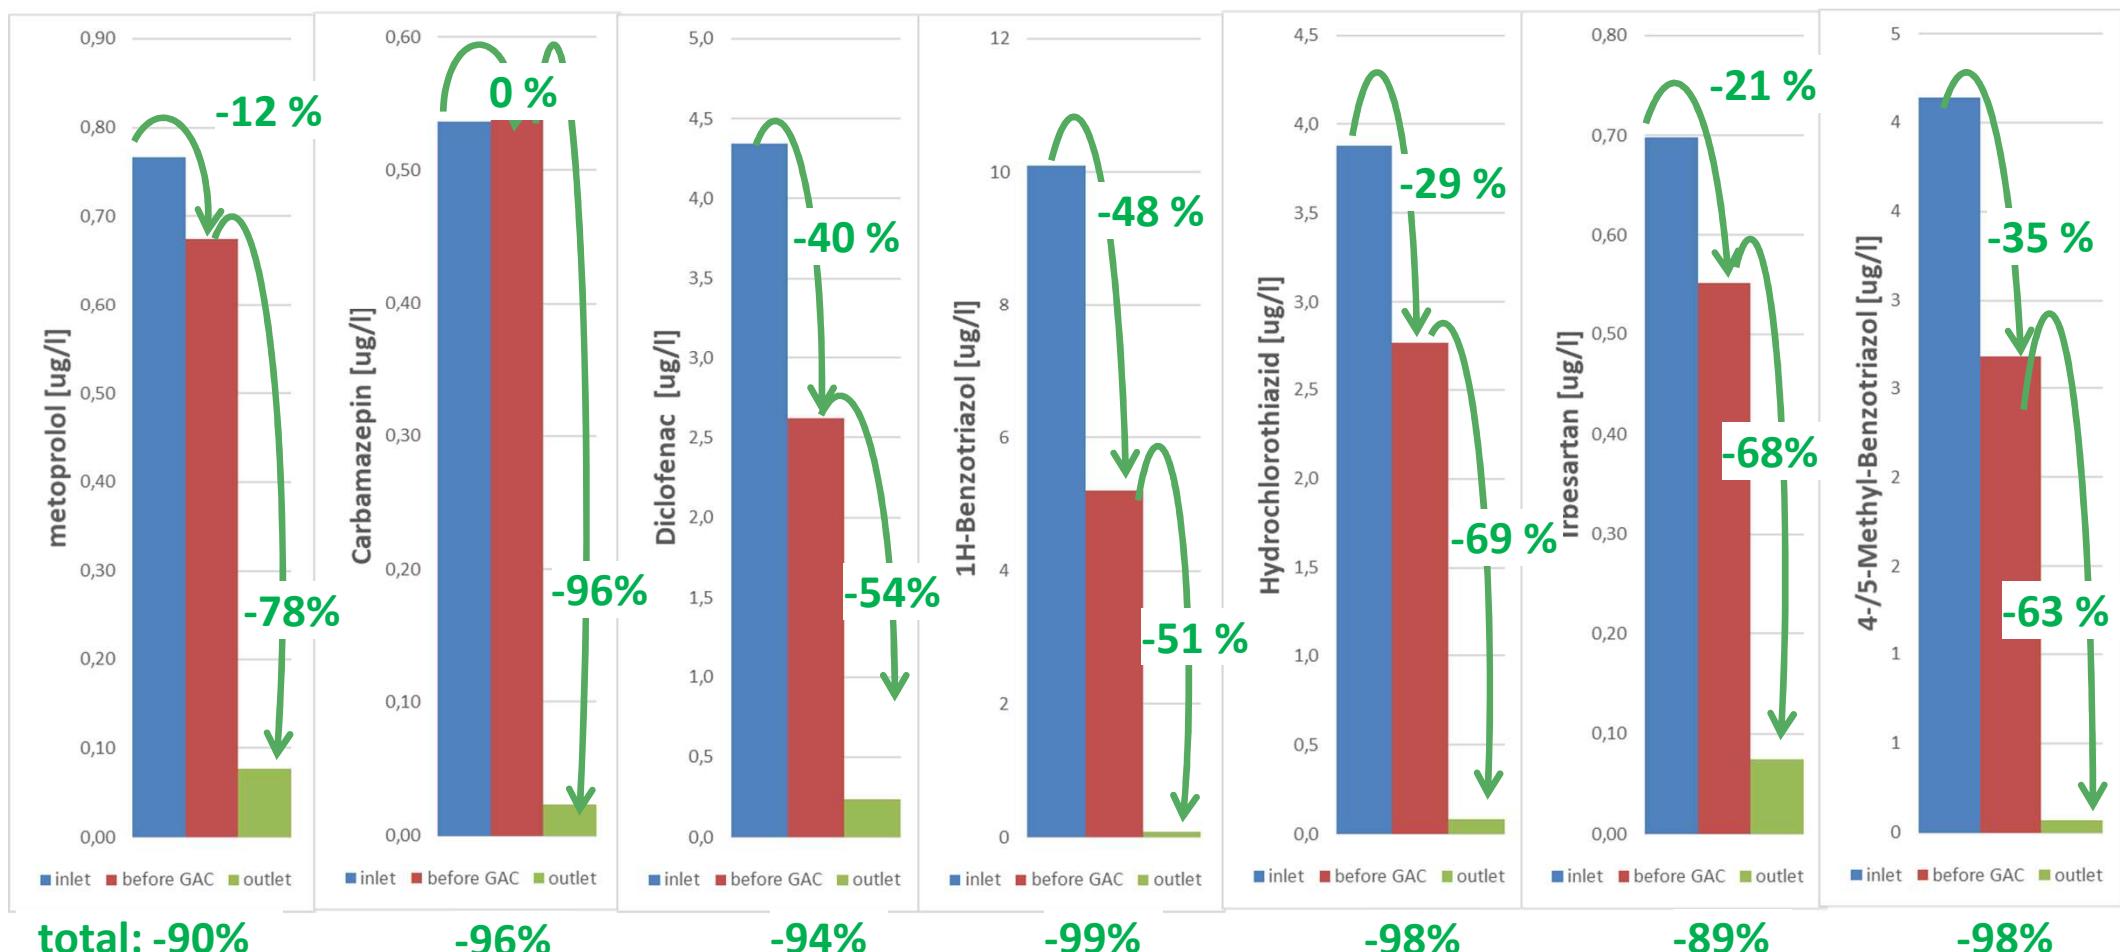

- = Inlet GAC
- = Outlet GAC
- = Return / flush water
- = Sludge water
- = Feeding GAC
- = air

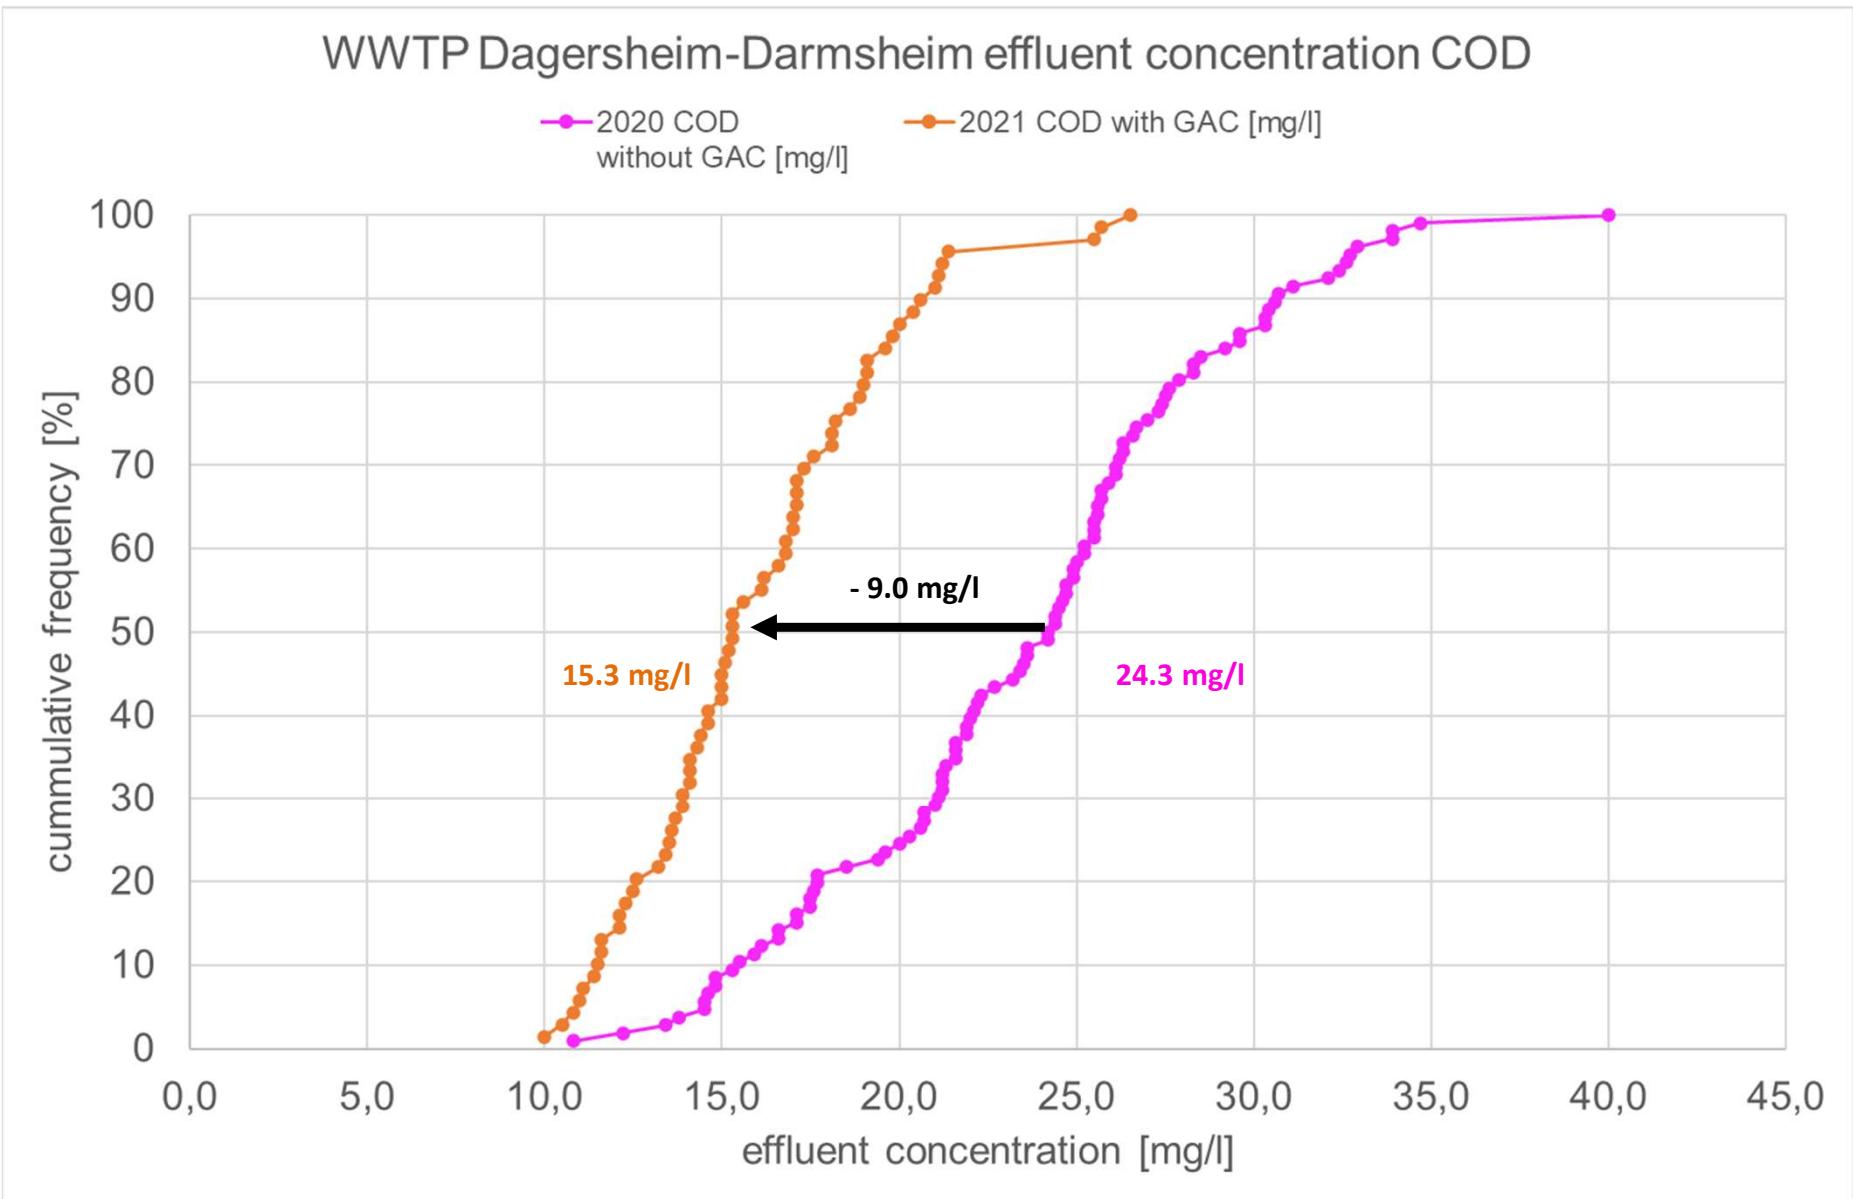

3. Elimination Efficiency

Inlet
before GAC
outlet

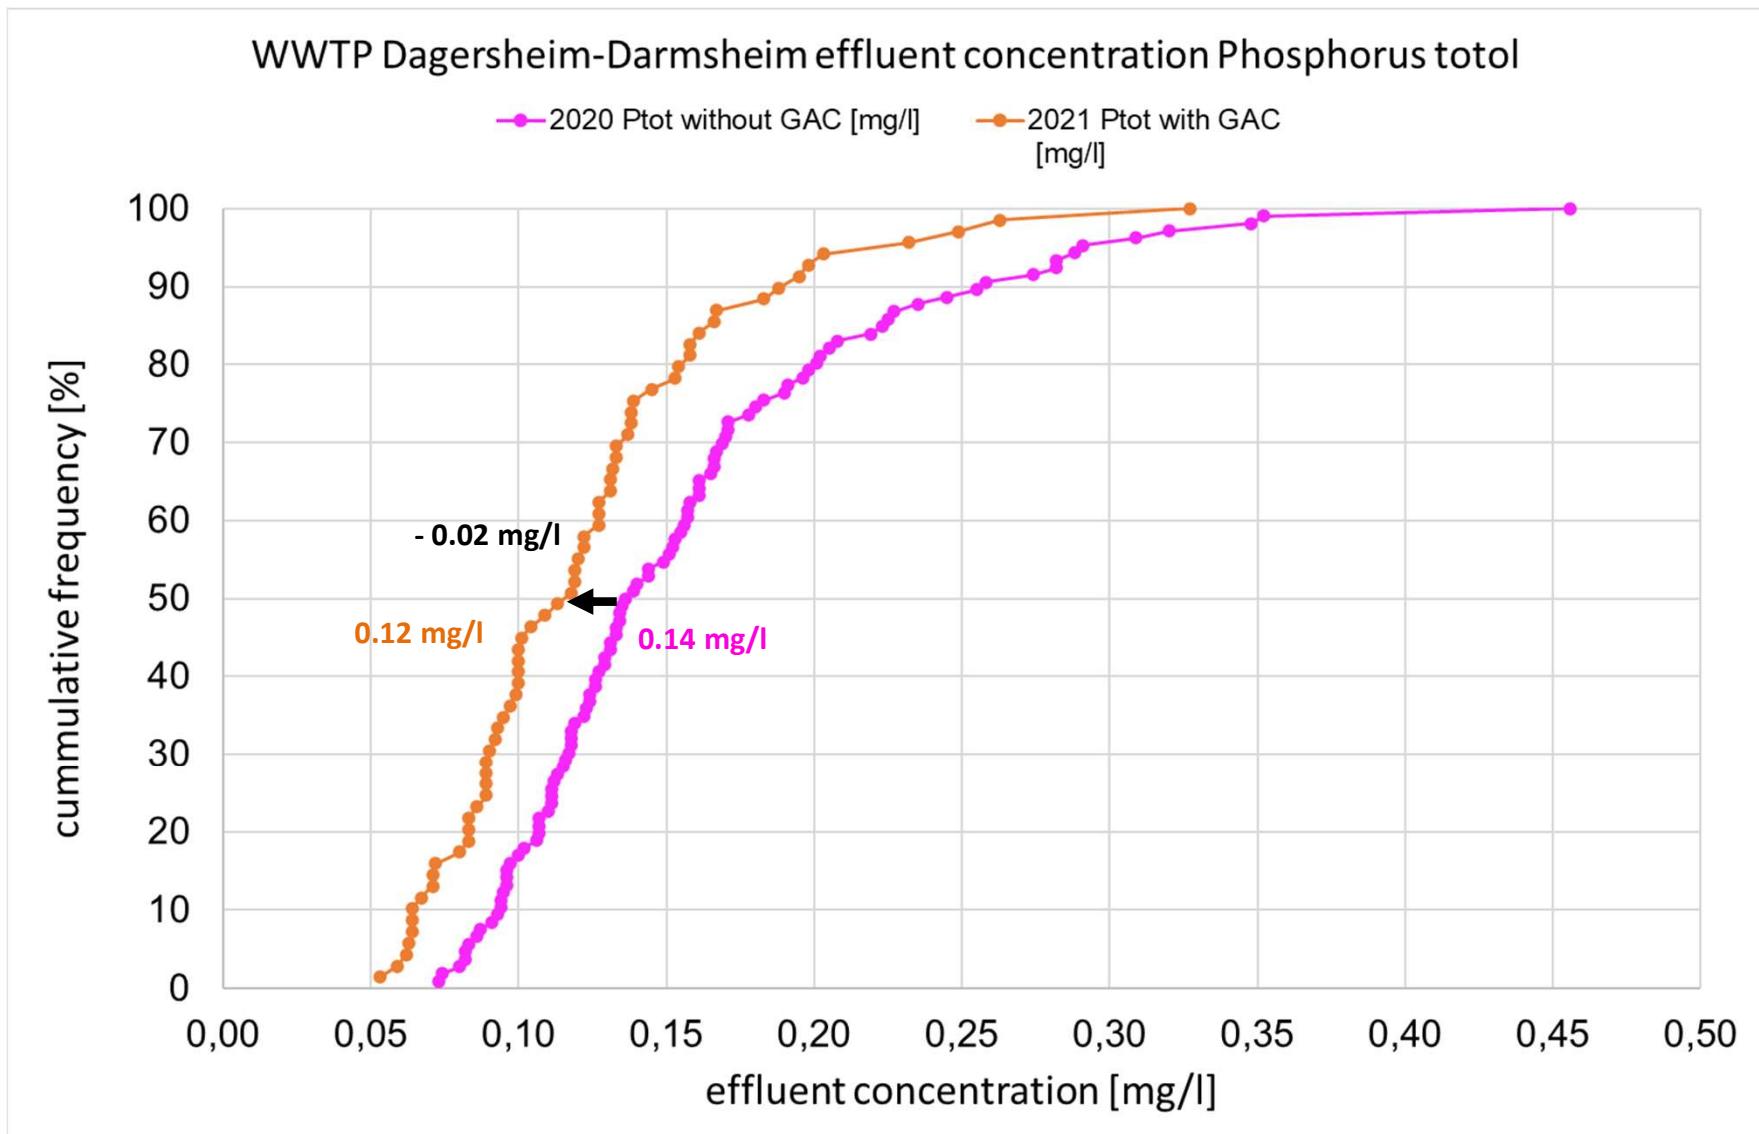

**elimination of micropollutants after commissioning 2021
with 3 analyses by KOMS**

3. elimination efficiency

3. elimination efficiency

4. Investment and operational expense

			WWTP Böblingen-Sindelfingen PAC	WWTP Dagersheim-Darmsheim GAC
investment				
	civil work	€	2.200.000	610.000
	mechanical work	€	1.380.000	600.000
	electrical work	€	240.000	200.000
	design and others	€	480.000	260.000
	total cost	€	4.300.000	1.670.000
contribution				
	contribution	€	2.100.000	290.000
	saving of the waste water duty SIFI		792.000	792.000
	saving of the waste water duty DH	€	42.000	42.000
operational cost				
	activated carbon and other consumable	€/a	271.000	44.000
	electricity	€/a	35.000	11.000
	personal	€/a	23.000	5.000
	maintenance	€/a	10.000	5.000
	total cost	€/a	339.000	65.000
annuell cost				
	total annuell cost	€/a	425.000	95.000
	total annuell cost for SIFI +DH	€/a	520.000	
waste water fee calculation				
		m³/a	7.450.000	
	price increasing	€/m³	0,07	
	with 40 m³/(p*a)	€/(p*a)	2,79	

waste water fee
1.6 €/m³
approx. 60 €/(p*a)

5. Future energy concept

What to do for energy neutrality

decreasing electricity consumption
(approx. – 20%)

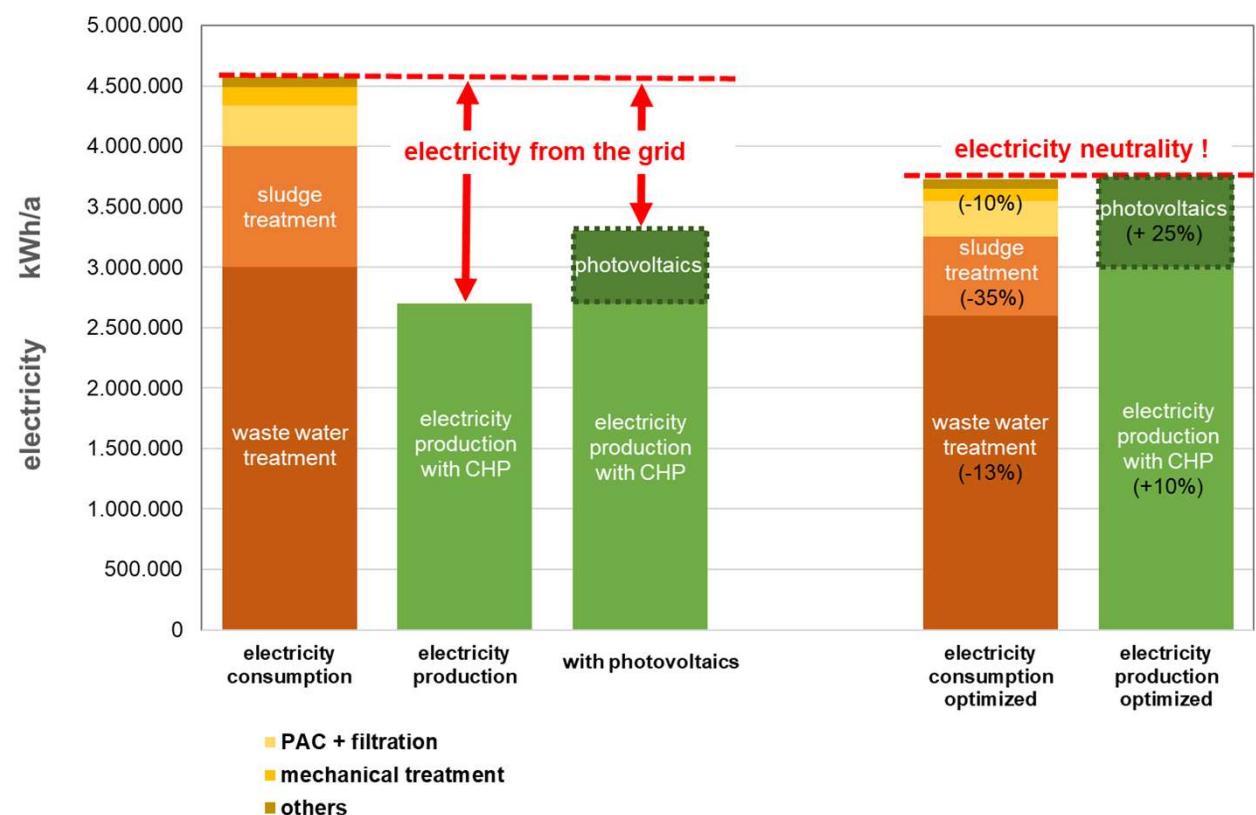

- process optimazation
- high efficient motor

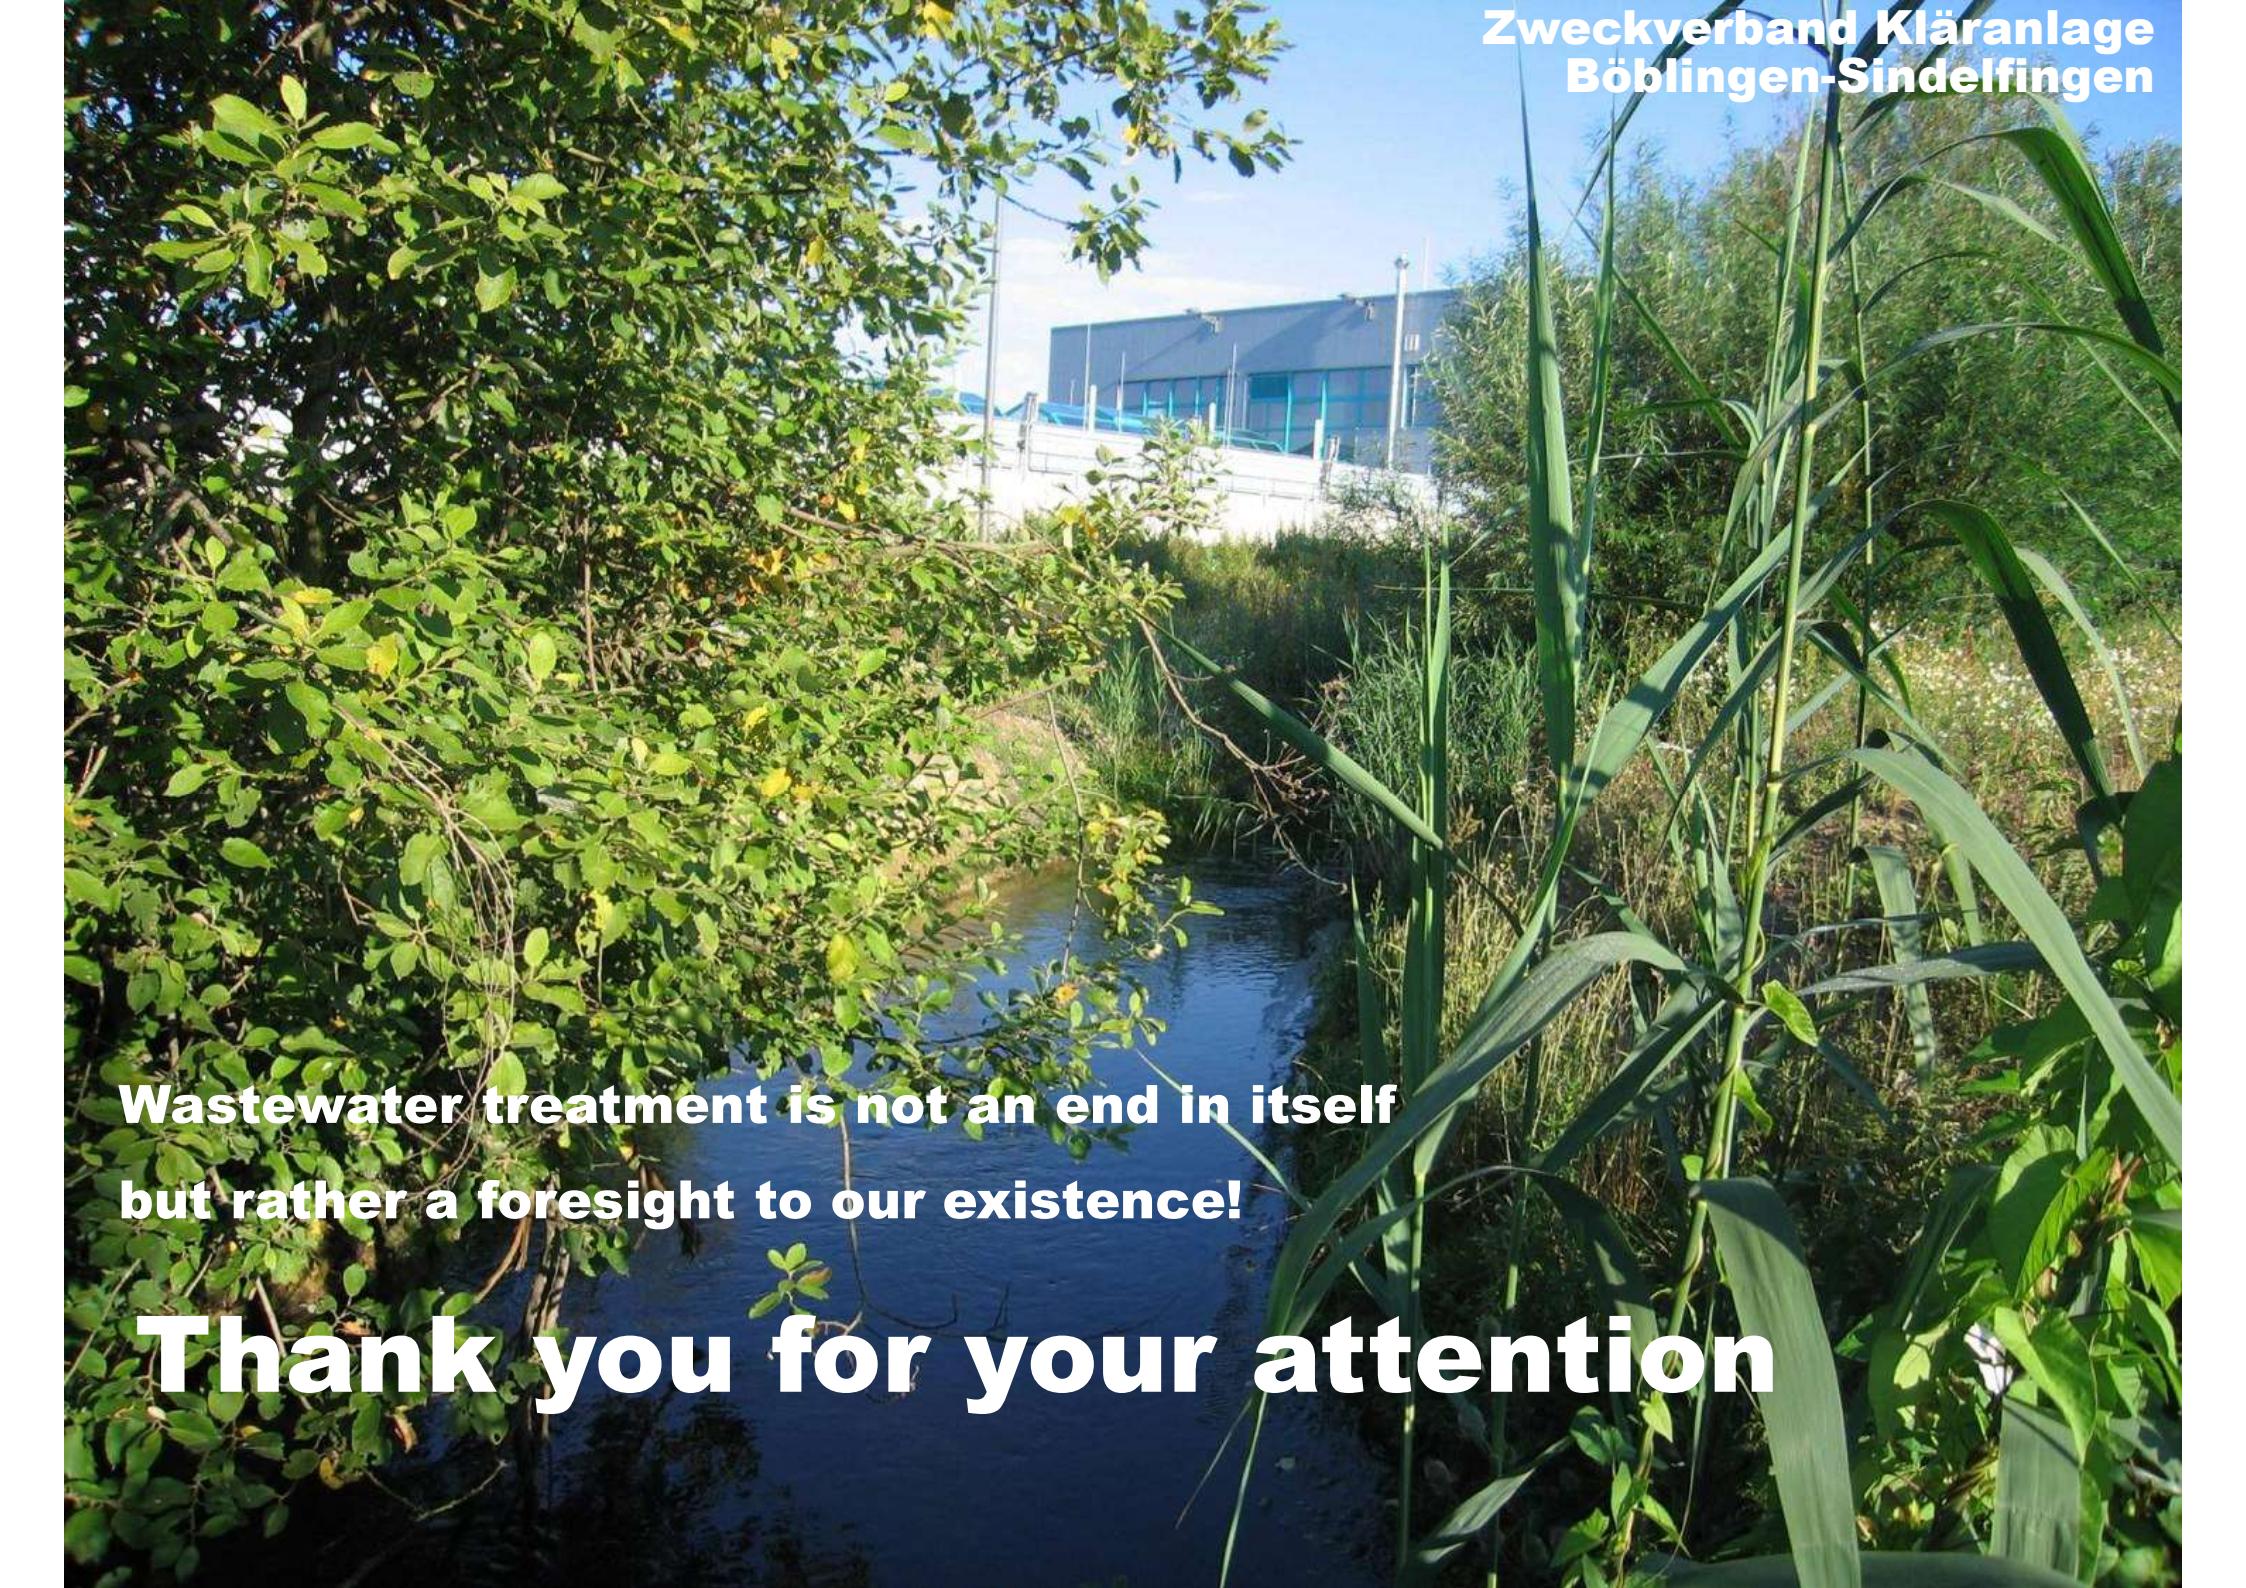

increasing electricity production (+ 15%)

- increasing efficiency CHP
- increasing biogas production
- extension of the existing photovoltaics

existing situation

„future“ optimization

**Wastewater treatment is not an end in itself
but rather a foresight to our existence!**

Thank you for your attention
